This was a good month back bro, For some reason when I entered my combo list and clicked generate it would say creating combo list or whatever it would say (cant remember to full extent) I remember waiting around 10 minutes for it and still it didn't create anything so had to close the program down via ctrl + alt + del. I don't know if you fixed that at all?

Not sure why you would try and load a list that large?

Just use a splitter to chunk it into 2-3 mill files, a lot easier to manage.

So far I've experienced a lot of crashes and errors when checking proxies.

Haven't really bothered too much with using it for this reason.

Overall it works okay, when it does work. But the crashing/error issue is extremely annoying.

--100% Honest Review--

First let me start out and say this is the best cracking program i have ever used. That might sound exaggerated but im being truthful on this. They are not lying when they say "stable" because it is exactly that. I have had this program running for days without it crashing it can go through several million combo list if your PC can handle that. The program is fast but keep this in mind it can only go as fast as your PC and Proxies are. That being said dont think you can use some old piece of shit you picked up at the nearest thrift shop and think you'll be cracking tons of account no sweat. The

best part about the program is the multi module cracking so you can load in a User-Pass combo list and be cracking 10 different sites at once! But that comes with a price if your pc is not that great you can expect alot of dips in performance. The Combo list generator is a nice touch aswell it is very useful so you dont have to buy Combos of fish around for any. Overall I would rate this program a 9/10 something i think could be improved is more modules added or fix some issues involving capture sometime there is an error or does not capture at all. Any way these problems could be fixed later on and thats why im giving this such a high rating.

Note: Im not affiliated with this seller and this review is 100% truthful if the seller/buyer does not agree with me that is fine this is just my experience with the product.

also spoke to MR Cruise on skype about some ideas for improvment including a plugin system and hes definety up for making things better all round great tool and seller :D

This is the most legit cracker I've seen on this forum. Top notch, and if you are looking for a legit tool, this is great. I struggled to find a great way to crack certain accounts and this tool made it easy as cake.

Marketing - March 4, 2017, 8:03 pm

I've purchased this software (I'm a beginner at cracking)

What I came to find is that I know absolutely nothing about the software and how to use it.

I'm not dissatisfied with my purchase, because it was only \$5

But, I would really appreciate a better 'readme' in the files when downloading after purchasing.

However, the GUI is very attractive and is the biggest reason the \$5 fee didn't phase me when thinking about purchasing this software. I saw that this wasn't developed over night, and time was taken to make it a good product.

I'm not dissatisfied with my purchase, because it was only \$5

But, I would really appreciate a better 'readme' in the files when downloading after purchasing.

However, the GUI is very attractive and is the biggest reason the \$5 fee didn't phase me when thinking about purchasing this software. I saw that this wasn't developed over night, and time was taken to make it a good product.

First let me start out and say this is the best cracking program i have ever used. That might sound exaggerated but im being truthful on this. They are not lying when they say "stable" because it is exactly that. I have had this program running for days without it crashing it can go through several million combo list if your PC can handle that. The program is fast but keep this in mind it can only go as fast as your PC and Proxies are. That being said dont think you can use some old piece of shit you picked up at the nearest thrift shop and think you'll be cracking tons of account no sweat. The best part about the program is the multi module cracking so you can load in a User-Pass combo list and be cracking 10 different sites at once! But that comes with a price if your pc is not that great you can expect alot of dips in performance. The Combo list generator is a nice touch aswell it is very useful so you dont have to buy Combos of fish around for any. Overall I would rate this program a 9/10 something i think could be improved is more modules added or fix some issues involving capture sometime there is an error or does not capture at all. Any way these problems could be fixed later on and thats why im giving this such a high rating.

Note: Im not affiliated with this seller and this review is 100% truthful if the seller/buyer does not agree with me that is fine this is just my experience with the product.

Thanks for the Review I m glad you impressed with the product new version with much more improvements and features is coming we are working on it

timdahacka - March 26, 2017, 1:41 am

Alright, I don't know if it's just me or everyone has issues too. One of the issues are it would randomly crash at times while it's scraping proxies, checking proxies, and cracking accounts. Not only that but I even let it run off of the combolists and I never get a single account. And it's been running for almost 3 hours. I tried both username and email combolists and even some I found online but none of them gave me an account. I even tried generating a combolist and still nothing. Can someone please help me? I'm getting quite frustrated as I did pay \$17 for the lifetime package. And it hasn't even worked for me yet even though so many people commented that it worked for them. Oh, I just got an account as I was typing this, its an Instagram account. But it doesn't even work... it said incorrect pw.

(Apr 12, 2017 04:12 AM)Neno Wrote: [\[CITE\]](#) I'm just wondering has this program updated yet? dose not have the facebook or skype moduals advertised in the thread but i have sent the OP a message about developing some more moduals possibly if they would provide the base code needed for the moduals to be created just waiting on a reply

the application is good and solid had it running for over 8 hours straight on my alienware laptop no issues at all using 100 threads no other heating nothing just see image below

only thing that i think is holding this tool back is the lack of public modual creation and sharing / possible selling would be un beatable if the OP was to allow / build in the option for modials to be imported to the app that where created by others to have a true community style plugin system

elwazir - April 16, 2017, 11:48 am
