Thread: [JavaScript JS, JavaScript JSON, HTML, CSS, PHP](#)

ForumSupport - January 13, 2017, 1:21 pm

I'm looking for people who know a lot about developing a game using JavaScript JS, JavaScript JSON, HTML, CSS, PHP and jsnode

I think it was I may also be interested in a game designer to create terrain, npc, buildings, ect.

Message me if you know the following very well but mainly PHP and jsnode JavaScript JS, JavaScript JSON

I nearly forgot to mention I have a base we can work off.

Still looking for a jack of all trades person.

SaintWest - January 14, 2017, 8:55 am

Shoot me a PM with more information. I'm very experienced with all of these languages.

"Javascript JS" is like saying "Butter butter". ;)

Also its "node.js" not "jsnode", unless thats some new technology :D

Next thing, why do you need a node and php developer? I mean both are server technologies, and both can be used to do same stuff lol.

Anyways hit me up with details on the job.

ForumSupport - January 19, 2017, 1:54 pm

Still looking for someone.

Argyl - January 19, 2017, 1:57 pm

I know and work with all the languages you described. PM with what you are looking to get done.

I have a little under 4 years experience with Javascript/HTML/CSS, 2 years with PHP, and 3 years with JSON, but I don't have any experience with jnode. I have some experience creating 2d games, but my real expertise is creating complex algorithms and theme styling/design. PM me if you want to see some of the coding projects I've worked on.

I nearly forgot to mention I have a base we can work off.

Good afternoon, what's the base like?

And the game? I may be interested based on that.

Im interesting. I know nodejs, js, html, css, and json.

What is your game ?
