Thread: [Fresh Windows installation infected?](#)

ChickenChickenow - January 14, 2017, 9:48 am

Hey

Just installed Win 10 Anniversary on my laptop, was a pain to move Users folder to HDD instead of SSD so I'd rather not reinstall it...

I wanted to try "HitmanPro Alert" so I downloaded it (not from official website) but didn't like it so I uninstalled it.. Then I downloaded BitTorrent Pro and Malwarebytes Premium, did a scan and it looks all clear except I was getting malicious IP notifications from "8528.exe" I stopped it in task manager and deleted it.. It's no longer here for now but I'm still paranoid.

Can somebody help out? I really don't want to reinstall windows again

Thanks in advance

Farbar Recovery Scan Tool (FRST) ScanPlease download [Farbar Recovery Scan Tool \(x32\)](#) or [Farbar Recovery Scan Tool \(x64\)](#) and save the file to your Desktop.

Note: Download and run the version compatible with your system (32 or 64-bit). Download both if you're unsure; only one will run.

Double-Click FRST.exe or FRST64.exe to run the programme

Click Yes to the disclaimer.

Ensure the Addition.txt box is checked.

Click the Scan button and let the program run.

Upon completion, click OK, then OK on the Addition.txt pop up screen.

Two logs (FRST.txt & Addition.txt) will now be open on your Desktop. Copy the contents of both logs and paste them to [pastebin.com](#). Post the link here.

In your next reply I get from youFRST.txt

Addition.txt

Here:

<http://pastebin.com/WdCqtUxX>

<http://pastebin.com/VjeUMZK8>

On reboot I saw the file is back in appdata/local/lddnsoft/
it's trying to access winsrw.com

If you torrented the iso for it than it could be infected by the uploader

ChickenChickenow - January 14, 2017, 11:28 pm

Got a BSOD and windows didn't boot anymore so I had to reinstall it.. Sorry for wasting your time and thanks anyway
