sHAY - January 15, 2017, 10:49 am

Looks really good, will probably help some members looking for some type of hosting service.

TheChi?f - January 15, 2017, 11:08 am

Great list of websites. Online.net is another host for dedicated servers, feel free to add it.

N1l0c - January 15, 2017, 11:12 am

Thanks, added it to the list!

AshleyUK - January 15, 2017, 11:23 am

OVH allow Windows for both Dedicated servers and VPS's.

I would also suggest including its sister companies SoYouStart and Kimsufi as they are marketed at different needs.

Brewin - January 15, 2017, 11:51 am

Awesome list Int3rp0l! Will help plenty of people out I would imagine.

@Int3rp0l

Thanks for the share, per your comment of " If you own a hosting company, feel free to add a coupon code." I want to give this deal to everyone! :)

We just want to inform all HF members that we are giving away 25% off to new customers on all orders!

There's no clearnet bulletproof host. You will have to change that. All clearnet hosts claiming to be 'bulletproof' are simply bullshitters.

And hey, winity.io has the best bang for the buck Windows servers.

I understand what you mean but i've worked for Cyberbunker and vouch for them. They're of course vulnerable to DDOS but totally ignore all letters by government instances.

Good thread, but fix the html tags.

And there's <http://amazonlightsail.com> with 1 month free.

HostSlick.com actually sells Windows servers as-well, link below.

Squito - January 19, 2017, 3:34 am

Although not enterprise level, but I think Kimsufi and SoYouStart should also be included in the dedi section.

Fucci - January 19, 2017, 3:39 am

You should add a DCMA ignored tag to further categorize these for ease of people viewing the thread.

I'd also suggest you add what payment methods that are accepted (BTC/Alt etc.)

Also add this hosting service:

[OrangeWebsite](#)
