Thread: [Online anonymous crypting service, C/Assembly, \\$20/crypt](#)

onlinecrypt - January 15, 2017, 2:51 pm

Hello HackForums users,

I am offering sales for an online crypting service at the following address: <http://zti3trzlefnwcene.su>

Details:

- >>> Stub coded in C and x86/x64(wow64 syscalls) Assembly
- >>> Supports PE32 and .NET PE32 (Must have valid .NET Metadata and must work with Assembly.Load loading, output remains a native file after encryption of a .NET Program.)
- >>> Automatically appends overlay data
- >>> Engine generates relatively unique crypts on each submit, it generates junk codes and mutates the NSIS Setup Installer script, it also encrypts the C/Assembly shellcode then appends a self decryptor which is slightly mutated when needed.
- >>> Payload is ran using the RunPE method, all system API are called using manual system calls (int 0x2e, syscall/sysenter), it allows bypassing of behavioral filtering on 64bit operating systems because antiviruses are limited to user-mode API hooking, on 32bit operating systems few antiviruses still apply usermode hooking thus allows this crypter to bypass their whole filtering system.
- >>> PE Loader execution is available to customers on demand, it's less compatible and will not process and callback Thread Local Storage (TLS) Directory.
- >>> Code is tested and execution rate is maximum.
- >>> Crypting website is automated, anonymous and keeps no tracking of the user information and files, cookies are used to store information about orders when processing payments, keep your browser open while making orders to avoid losing cookies and your order status.
- >>> 7 days a week support & updates if required.

Price:

You can find every details about pricing on the site

Base price is \$20 per crypt

Subscription is also available (Base: 1 day, 1 file for \$20), check the site for more details.

Note: In case of scantime detected outputs, please contact support to get a token replacement.

Runtime testing:

Note: Eset's memory scanner is bypassed if the injected image remains in it's allocated region by the crypter, .NET executables does not remain in this region so eset's memory scanner is not bypassed with .NET programs.

Spoiler ([Click to View](#))

Comodo has "virtualized" the application, but it does not detect it, also I doubt it can prevent manually performed system calls from executing on the host system.

Contact:

XMPP (Support/Sales): crypting@exploit.im (OTR Required)
Please do not PM support requests, I AM RESELLER ONLY.

TheMockingBird - January 15, 2017, 4:03 pm

Seems like a nice service, GLWS ! ?

Look to be a legit and great service. GLWS.

The Unknown Coder - January 19, 2017, 9:37 am

Using putty to prove your runtime means nothing. Every av knows putty is not harmful upon decryption. Any crypter shouldn't have a problem bypassing putty.

Use netwire. I'm interested in this service will buy once you prove a valid runtime.

onlinecrypt - January 19, 2017, 9:46 am

(Jan 19, 2017 10:37 AM)The Unknown Coder Wrote: [\[CITE\]](#) Using putty to prove your runtime means nothing. Every av knows putty is not harmful upon decryption. Any crypter shouldn't have a problem bypassing putty.

oke man why are you doing critisim when you can't afford a single crypt and have your talking justified

the service has nothing to prove to anyone, it is already established on various forums

runtime detection is a sensitive subject

the crypt will not add runtime detect to your file, it can remove some, but never add if some still exist after crypting, you need to change your file

that's how it works

it would be meaningless to test with something that has its own runtime detect or fingerprinting

it is not going to be done

but! you can buy and do it yourself then post it

but it would still be meaningless to the quality of this one service (i agree that it can give an idea)

cleaned -

I don't really think that's normal for a 20 dollar private crypt..
Crypters like static crypt can often do that or will go to 1/35 in 1 day...

I've had private crypts before and they used to last weeks and sometimes even months. I am sorry but this is not worth 20 dollars (for me).

French Products - February 9, 2017, 6:52 am

That's not exactly the same thing that my crypter.

I talked with this guy on xmpp and asked him some informations, so I purchased a crypt just because I was curious. The stub is like ~60kb and doesn't need icon/Version Info to be FUD. His crypting service is in C, so it is not working as Autolt. Autolt has an interpreter in C++. I just saw what he's using and I may vouch for it without any AV runtime testing, the output look to be 100% legit for any AV (till that the cloud find the malware ofc).

onlinecrypt - February 9, 2017, 11:02 am

yes man

but you forget, how long does it takes for it to be clean again, does it pass runtime, this is not private crypting, this is constant clean files for mass spreading, maximum execution rate is guaranteed, small stub size, no bugs, and no dependencies

onlinecrypt - February 20, 2017, 8:52 am

hello

there was some recent updates on anti emulator methods

expect less detects from kaspersky and Forticlient

bye

Wardow arrested

Confirmed by one of his friends: <https://i.imgur.com/ls4zRAs.png>

Wardow was 13-14 not so easily arrested. I call bullshit. He is fine and dandy. More likely that his parents got fined or something then him going to jail.

All he has to do is tell the French police is a was religiously motivated say Allah Abkar and the French police will him go hahaha ? (as they have with rapists same should be a with a 13 year old who codes a crypter.)

Also the picture proves nothing seems like 3 years olds are talking. :P

You are right. I had to read it like 5 times, the guy has the grammar of a four year old. None the less. My point is still valid, obviously its not everyday that they speak or Wardow wouldn't had bothered to reply. Especially since supposedly he was arrested. My point is still valid, despite his piss poor grammar skills. And granted English is my 6 language I still don't speak nor write it perfectly but at least I don't type like an imbecile.

(Mar 12, 2017 05:14 AM)The Unknown Coder Wrote: [\[CITE\]](#) You are right. I had to read it like 5 times, the guy has the grammar of a four year old. None the less. My point is still valid, obviously its not everyday that they speak or Wardow wouldn't had bothered to reply. Especially since supposedly he was arrested. My point is still valid, despite his piss poor grammar skills. And granted English is my 6 language I still don't speak nor write it perfectly but at least I don't type like an imbecile.

What?

Take your e-penis and smash it with some heavy shit

Don't treat scapula like an imbecile or pretend you know me for whatever reason, I never talked with you.

Seeing your incompetence I have no issues determinating your progression in life, continue like that, and all you will get is a big hole instead of your anus.

Have a good day, cunt

Have a good day, cuntI do know you like I said I haven't spoken in years that is fine you don't know this tag. And I could very well treat scapula like an idiot, one who behaves like an idiot should be treated as one. The entire point of this was to prove you weren't arrested which you weren't so cool. I proved my point.

Don't assume things like if you had an omniscience skill.

Spoiler Alert [\(Click to View\)](#)

You don't.

Be a kind man and hide your set of cards, even if you don't have any, but don't be like you have some.

You seem not to know well the law of basicly any democratic country.

You aint getting thrown in a closed room as soon as you get suspected of violating the law, you don't yet until proven.

There is procedures and during this time, you can most certainly, as an example talk to people on online forums.

Last time I check France has a constitutional republic so yes I do know the law.

Anyways I don't wish to argue with you I have nothing against you. THE POINT IS THAT YOU ARE NOT BEHIND BARS.

Like if you get behind the bars the day you get suspected, you seem NOT to know much about the law ..

You wont go far with this behavior.

Suspected and arrested is not the same...

Once, more I posted because of this.

He probably stopped the project, his website is down since more than a week, so...

Rsau7 - April 8, 2017, 9:21 am

Vouch for this crypter.

It's really funny how competitors down vote this thread, if you're interested in buying this crypter, i can tell you this is the best you can get on HF, just read vouches on all byte crypter threads.

The crypter is down

Flacon - April 8, 2017, 1:08 pm

this thread should be trashed and author removed he is kia in battle

FoKilPt - June 10, 2017, 9:29 am

Yeah, this thread needs to be archived or closed for sure.

freed00m - August 2, 2017, 2:44 am

Hello NetWire users

for good runtime you should do little things when you create your sever

1 - disable the installation setup (startup) add to system startup HKCU/RUN

2 - also disable ActiveX option

3 - disable copy to location path i the crypter desn't include a startup settings ... just minimize those settings ** the most important thing to disable is keylogger of NetWire it's the keylogger behavior is so suspected in netwire just disable it and you will increase your runtime to 90% i tested it
go to Page Extra on Setup click trick off in Keylogger and offline a keylogger

Why you post here if the crypter is down?

Fulya Donmez - August 14, 2017, 1:33 pm

Is the crypter up now? waiting for reply

FederalReserveOSRS - August 14, 2017, 1:36 pm

20/dollar a crypt? Wtf has this site come to. Back in the early days you could get this for 1 dollar

kevy42 - August 14, 2017, 3:21 pm

looks nice. btw Putty for runtime testing?.. wtf. And dont tell me that ooo ur payload needs to be runtime FUD bla bla, this is only partly true, yes NO crypter can get something like CryptoLocker to 1/20. But crypters do play a big role in getting the already existing runtime detections on a payload thats lets say 20/40 scantime down to 1/20 runtime.

The payload im crypting with my crypter has a runtime detection of 9 - 12/20(i tested the runtime about 5 months ago when its was scantime FUD), but after crypting it the runtime detection becomes considerably lower, 2/20.

NOTE: i use DYN CHECK aswell for testing runtime.
