Hotmail Availability Checker?

How would i go about making a batch code that will check email.txt and scan them to see which is taken and which is not i had one of these awhile ago but lost it when i had to get new laptop if someone can help me go about making this thanks.

No, that is not possible with a batch file. For advanced projects you need a real programming language

What he asked was a batch file that checked a .txt file, that should be possible, even in something as simple as Batch.

Definitely possible, you'd just have to search the file for the string that you're questioning the existence of

assuming it's one email per line then that should be quite a simple task, loop a FIND through the entire file, if it finds a match, say so.

Sorry I can't give you a better answer but I'm super busy and can't write a proper script, hopefully you can take this as a learning opportunity :P
