Pretty sure you've just deleted a thread then remade this, do not think you're allowed to do that.

I did not, check my warning level, it is at 25% because I asked to post for a pm, I think I am allowed to make another thread, as long as it fits the rules

Please correct me if I am wrong

Also I can't delete my own threads as I am not Ub3r

Maxie - January 17, 2017, 10:37 am

I'll take a look at this, thanks OP.

LMAO ?

?Criminal - January 17, 2017, 10:44 am

this is misleading because it doesn't magically infect the person BEEF is simply a pivot point, most of this is common sense if you have experience with BEEF.

But still I think it helps lots of beginners, who wanna go a bit more advanced ?

Maxie - January 17, 2017, 10:49 am

OP, it's really nice of you, but the title is very misleading.

PSEUCHO I loved the irony in this post and appreciate the share! I was wondering if you can provide an in-depth tutorial on the latter extent of BeeF's capabilities. I wanted to know if the hook script can be initiated with persistence and if you could provide a know-how tutorial on using BeeF with a VPS or IP-forwarding, namely using Beef in WAN...
