Thread: [Basic HTML Question](#)

**Immortal Modz** - January 18, 2017, 2:44 pm

So I seem to be having trouble with images

Here is an example of code

```

```

So lets say I wanted

```
[img]http://r.ddmcdn.com/s_f/o_1/cx_633/cy_0/cw_1725/ch_1725/w_720/APL/uploads/2014/11/too-cute-doggone-it-video-playlist.jpg[/img]
```

Or maybe some other image

How would that look on the code? Like what would I put for src and what would I put for alt?

**izana** - January 18, 2017, 2:46 pm

You should put the URL to the image for src. alt is supposed to describe the image for SEO and blind people using screen readers (For example "<Company> Logo" is it was a company logo)

**Web\_Development** - January 18, 2017, 2:47 pm

Code Or
```

Code 
```

Alt is just alternative text if image does not loads, it can be anything or you can even not use it at all...
