Thread: [i dont wanna be a script kiddie anymore :/](#)

redsquirrel - January 18, 2017, 4:18 pm

how might i accomplish this? does using kali linux constitute as being a script kiddie? previously i was using running premade programs but i feel like a noob and i want to learn more. i have some experience using the command line terminal in linux and ubuntu so i might give kali linux a go. i know some java and c++ but not enough to write my own viruses. anyone who isnt a script kiddie please elaborate to me or point to me where i can pick some new stuff. in the future i want to learn how to break into server databases and create a botnet for ddosing

If you want to become a real hacker you need to learn HTML and CSS.

Seriously though if you want to learn about compromising database etc a fairly novice way to do so would be SQL injection, it's relatively straight-forward and there are lots of resources both on hack forums and google.

And Clojure. The real hacker language.

Wakka - January 18, 2017, 4:23 pm

Red Squirrels problem is he is wanting to do too much, he should first focus on 1 specific area of hacking.

Start learning a few of the [OS basics](#) before you jump into hacking. Learn how to work your way around a computer and do basic tasks using terminal. If you have multiple devices, try to learn how to use [SSH](#) and SCP. Then maybe practice something simple like the [Aircrack suite](#).

You'll have learned the basics of using linux and how to run programs through bash once you're done. Let me know once you've done this and I'll help you one on one.

I'm new, but I wanna keep Win as my main OS. Could I get VB and just download a linux distro? ?

fapninja - January 18, 2017, 8:54 pm
Learn to code in assembler.

Visual Basic = VB

FractumSeraph - January 19, 2017, 6:30 am

Keep in mind that if you're using a VM you will need to have a decent computer to be able to run it will. It will essentially be cutting your computers performance in half.
Also, to do wifi attacks you won't be able to use built in wireless cards.

I would not recommend doing anything related to Visual Basic. It is very old and can be replaced by C#. (Visual Studio)

No, he means virtual box. Virtual basic there doesn't even make sense...
