Thread: [ExterByte and Luminosity Link](#)

fbiman098 - January 21, 2017, 3:59 pm

What are the best settings for ExterByte and Luminosity Link together?

henktenk - January 22, 2017, 7:57 am

want to know the same.....

DelusionalGhost - January 22, 2017, 9:52 am

Imao common question never answered

KING - January 23, 2017, 10:22 am

1. Use Persistence both Process and Startup.
2. Use Automatic injection method.
3. Use custom icon.
4. You can also select any other option you would like to use.

Note: Make sure to disable all installation/startup settings otherwise you won't be able to crypt your file. If you face any issue just get in touch with our support through Skype, Live chat or Contact form. :)

What about not using persistence would something like this work (on keeping the rat on startup) (All install options disabled on LL)

Yes, It should work fine. ?

alacartec - January 27, 2017, 6:37 am

Some error: invalid PE gets popping up after crypting luminosity and running it on other pc.
If i run as admin then it only opens crypted file.
But after restart it just shows error: Invalid PE and client dont start.
