You've likely got worms.

Yeah, it's a possibility: https://en.wikipedia.org/wiki/Pinworm_infection

Either that or you need to wash.

Just go to the doctor and let them surgically remove the worms from your booty-hole.

Fresh Khalifa - January 30, 2017, 5:12 pm

Dammit, now I have another thing to worry about. Why does this weird shit always have to happen?

:'(- January 30, 2017, 5:19 pm

Could also be piles/haemorrhoids

Do you feel lumps around ur bumhole

Have you been eating unhealthy lately?

You can buy a cream for this from the pharmacy

A P P L E - January 30, 2017, 6:50 pm

The diagnosis of the cause of anal itching requires examination of the anus for frequent anal problems such as hemorrhoids or fissures, skin diseases such as psoriasis or cancer, infectious diseases such as pinworms or yeast, and leakage of stool.
