Thread: [RSS Mailchimp Blocked?](#)

**Hydra** - January 24, 2017, 10:57 am

Trying to test something out with RSS using MailChimp's RSS Campaign tool. Doesn't work for some reason. Even with appending ".xml" to the link, it still doesn't accept it.

Anyone have a solution for this?

These work:

<https://hackforums.news/rss.xml>

<https://hackforums.news/rss.xml?du=2>

<https://hackforums.news/rss.txt>

These don't:

<https://hackforums.net/syndication.php?fid=162&limit=1>

<https://hackforums.net/syndication.php?fid=162&limit=1.xml>

"https://hackforums.net/syndication.php?fid=162&limit=1 is not a valid RSS feed."

It accepts rss.txt and rss.xml on my own server but it won't take the link from HF's domain. I wonder if it's a firewall set in place or something preventing it from taking the link.

RSS blocked. Sorry.
