Thread: [Signature problem - image not showing](#)

Gay - January 24, 2017, 2:43 pm

Hello hackforums, here I have a simple problem. My signature contains an image that links off to a website, and it is centered. The issue here is that the actual image is not showing, but rather only the link to the image, with the [img] tags. What is the fix for this issue? Everything seems fine on the [signature page itself](#), however as you can see just below this, the signature itself is messed up.

Here is the code:

Code [align=center][url=http://fastbets.io/s/h][img]https://i.imgur.com/HtgrS5C.png[/img][url][align]

The code's output:

Please note that in all previews, the code works fine. However on the pages themselves, the signatures are messed up.

The issue is that you need to embed a direct link to an https://-hosted image, you're linking to a non-HTTPS resource. Fixed it for you.

Make the link to https, not http.

Thank you! That was a quick and easy fix. This saved me alot of trouble.

Closing the thread now, thank you as well Maxim.
