Thread: [Multi VirusTotal Uploader by Hackoo](#)

Hackoo - January 24, 2017, 11:30 pm

Hi everybody ?

I have this idea from [this thread on White Hat Malware, Virus, and Rat Removal Help section](#)

In order to improve it, i created another one for Multi Virustotal Uploader

This is a special batch in order to upload your *.exe suspects files located on your temporary folder with command line to VirusTotal.com. ?

So, you should copy and paste this piece of code with your notepad and save it as :
Multi_VirusTotal_Uploader.bat and execute it by double clic.

NB: If you have any idea to improve this code, just say it ?

Multi_VirusTotal_Uploader.bat

I like how you utilized powershell to download things in batch. Well done

JoshuTee - January 25, 2017, 10:21 pm

Nice, but I think you should use another language for this JS, PowerShell or VBS are better choices IMO. You can minimize the amount of code and don't need a temporary file for uac.

Aura - March 1, 2017, 2:57 pm

I have no idea of what your script does to "improve" the current VirusTotal Uploader which works just fine.

Honestly, I'm more of a fan of BITS than the powershell method you used. In this case it doesn't make a big deal but with larger files you don't want a user waiting around without a display as to what is being done. BITS can show a progress bar.

I also have to agree with this. Whats the benefit of this? Seems like it would be easier to copy/paste the address of the uploader (which you have the version hardcoded so if it is updated, your script breaks). The GUI for the uploader is pretty intuitive and easy to use.

I want to use this tool with command line to upload a bulk of files listed in a text file instead to upload them one by one manually ; this not benefit for you of course , but for me it does nicely ? ?

bulk of files listed in a text file instead to upload them one by one manually ; this not benefit for you of course , but for me it does nicely ? ?

So the goal is for it to generate an output of results for you to look through. I can see how that would be useful. The question though is can the uploader run multiple instances for that to be possible?

Hopsin - March 2, 2017, 2:15 pm

Thanks for contributing, its not much but still can come in handy indeed. Have a nice day buddy!

Eh? VirusTotal Uploader allows you to upload multiple files at once...

Exactly what I was thinking, just select the files you want to scan, right click > virustotal upload

I just updated this script to determine if the OS is (32/64 bits) to set the correct path of VirusTotalUploaderTool.

I'm agree with you Aura that you can upload them by selecting and uploading them at once by right click when they are in the same path.

What i mean by upload with a bulk !

Example of FilesList2Upload.txt

Spoiler ([Click to View](#))Code "C:\Program Files (x86)\IObit\Advanced SystemCare Ultimate\ASCTray.exe"

"C:\Program Files (x86)\Internet Download Manager\IDMan.exe"

"C:\Program Files\Everything\Everything.exe"

"C:\PROGRAM FILES\MALWAREBYTES\ANTI-MALWARE\mbamtray.exe"

"C:\Program Files (x86)\InternetEverywhere\InternetEverywhere_Launcher.exe"

Considering you want help some membres that are in trouble with some suspicious files located on differents paths not in same paths this what i mean.

I will update this script as soon as possible, so you can give me another idea to improve it !

I made another script to [Download the last version of RogueKillerCMD and perform a scan in command line](#)

So, please, check it and give me some feed back for this later !

Thank you !

NEW UPDATE : Determine if the OS is (32/64 bits) to set the correct path of VirusTotalUploader Tool.

Scan the registry run keys to get info about your running keys and extract all their executables

paths.

Creating a file list to be uploaded by the VirusTotalUploader Tool to <https://www.virustotal.com>

Hello Hackoo ?

To optimize the code

Code (New-Object

System.Net.WebClient).DownloadFile('link/vtuploader2.2.*exe','C:\Temps\vtuploader2.2.exe') |

Start-Process "C:\Temps\vtuploader2.2.exe" '/S'

Download and run the installation in silencer

Very good script GG ?
