Thread: [Website Admin panel acces](#)

Kurczok - January 25, 2017, 11:38 am

So i found an admin panel on one site but it requires a login and a password.

Do you know any way of getting it ? (login and the password)

(im a total n00bie)

Viagr4 - January 26, 2017, 12:20 pm

You could try:

1.- Look for vulnerabilities. For instance a SQLi that allows to dump data and get those creds.

2.- Brute force it.

2.1- Try 'admin' and most common passwords (

https://github.com/danielmiessler/SecLists/blob/master/Passwords/10k_most_common.txt)

2.2- Create a custom wordlist (look how to use 'CeWL'), get as many existent usernames you can, add some common passwords. This can be done either with Hydra or Burp's Intruder (

https://portswigger.net/burp/help/intruder_using.html)

It's hard to give you an accurate answer without context tho.

links no good.

too short

If you play CSGO gambling. then you can pretty much make it to what you want to win if you get there admin panel

PerfectStorm - February 8, 2017, 2:26 pm

I second the brute force option
