Thread: [\[Guide | Tips\] Getting a dog?| the thread for you! | Tips | Guides | Explanation](#)

Lufasu - January 25, 2017, 12:22 pm

First of all my experience:

So, all my life I have adopted three dogs.

All the dogs were puppies and grown until today, I am currently with two dogs that the third had to give due to personal and health reasons, I had a very difficult moment.

I lived with dogs has been four years, knows how to educate them, to tame them (really basic thing or two).

The two dogs that I have now, one of them adopted after Facebook post on the immediate adoption request that no home and money to bring the dog to the pension.

My second dog, a very expensive kind, never thought something like this would happen to me, the dog found wandering the streets without sizing.

He cried and was with his tail between his legs, I knew it straight single and hungry, so I took him to my house I fed him gave him water.

Immediately afterwards I went to city hall to see who the owner of the dog, the dog did not have a chip, so they could not identify the owner.

So they wanted to send the dog quarantined, so I asked if there was any way the dog can stay with me, and they said I needed some additional documents and court approval and the Department of Animal municipality.

After about a week I got a positive response and the dog was sent to me, of course I signed the document that I am a dog owner and another document that I am committed to putting the dog chip.

If you wondering what type of dog is it - Japanese Spitz, you can see that he is really expensive and all the stuff.

So thats my experience with dogs.

Bringing a dog:

So, we can start the explanation and tips.

So you want to bring a dog home? Do not know what kind? Debating with buy?

I will recommend you and even more than recommend you to adopt dogs, not because you are saving money, but because you can save every situation of life a dog, start a new life dog who spent half his life in a cage.

So like you to think before you bring a dog, I'm pretty sure everyone in the country has its movements adoption of homeless dogs or abused dogs and dogs whose owners had left them on the street.

So, the question is whether to bring a dog when he is a puppy or dog is already large.

The answer to this question, it really does not matter.

You choose what dog to get, as long as you adopted a dog no matter what his age, let us say that this step had already pleased the dog, even he does not know you, I can bet he's his own heart glad someone came to take him.

So it does not matter if the dog is a puppy or a grown up, you've become more used to befriend him and he rather became friendly with you, his new owners.

So, you adopted / bought a dog, you've done your choice.

The next step is to take him to his new home where he will live the rest of his life.

The dog may be afraid at first but it's very natural, you know is not right, he does not know who you are, this place is new to him, and he must get used to.

In such situations, you have to show your dog good people and do not have a purpose to hurt him, but only to make him a good life.

Pat it, lift it, let him eat, hug him, kiss him, play with him, a very simple show him love.

This is seemingly very simple show him you love him, sleep with him and make him round the yard :).

He slowly gets used and will be your best friend.

Dog vaccination: Vaccines are designed primarily to protect the puppy and adult dog in the end because some infectious diseases are destructive. Dog vaccination timely, what have agreed in front of the vet is important to protect the dog while any chance to catch the disease or the other. If not inoculate our dog when he will be exposed to contact with a sick dog, with objects which touched a sick dog or places where the sick dog stayed in various strange diseases.

As puppies, dogs get three hexagonal vaccines and rabies vaccination, when they have not been fully environment and still relatively protected. When the dog first birthday, vaccine composition changes and from now on he will get two vaccines every year - a rabies vaccination and immunization antenna. Many think enough of the vaccine several times and not finish the entire story of the vaccine - this assumption is wrong! To vaccinate dogs in all vaccine is recommended to protect them.

I don't really know a LOT about vaccinations so please, ask a vet about it when you bring the dog, don't let your dog out without an vaccination.

Your dog education:

So, you adopt a dog, you do not know which dog you adopt, what he learned and what he has not learned.

In many cases it makes the dog needs at home, first of all I must emphasize, once their dog needs at home, I'll declare it, do not yell at him, do not hit him, rather than come clean and give him a threatening look.

It only frighten them and make them afraid of you, an unpleasant situation for the future of dog he will grow !!

He would be afraid of you, and can get sick with anxiety every time he does something wrong, then again, not to do what I mentioned above, this will only make a bad.

- For puppies who do their pee and poop on the house: Puppies can not resist a short time-out and the first months of life, therefore, should be allowed to leave as much of the paper (before vaccination hexagonal two) and outside (after the second vaccination antenna). For example, when two months old puppy can pee activity every 20 minutes.

When at rest can resist 2-6 hours.

That is no expectation puppy develop not do at all in the first months cheek - these physiological data, and we need to adapt our agenda to them.

One of the problems stems from German practices do everywhere. This happens when we do not assign the activity to a specific region, and in addition of course to clean him, and he does not distinguish between the different territories, ie, does not understand where to evacuate and where not.

How can we encourage defecation in a specific place? For example, using newspapers. The paper is a platform differentiated from the floor or carpet at home, when the puppy defecates say their newspaper to absorb them. This newspaper or a part of it, will be used to highlight further the practical needs designated corner. In addition, when the time comes to move out, it will be easier to do it with a used newspaper house, the same method, we take a newspaper or paper absorbed the smell provision as set out below in paragraph regarding tenure and habits.

- Preparing your puppy to go outside:

Once your puppy gets first vaccination operations can begin preparation to the habits of needs out there. This preparation is as important as learning and practicing to come later and aim to make the experience something pleasant and not particularly threatening.

It is highly recommended to let the puppy collar thin and limp in his first days in order to prepare it for the next step!

To avoid the puppy's condition initial shock hookah session with the exit road from home a puppy on your hands from puppy strength can pass it the first time on their hands clean from contaminants eg territories homes of acquaintances. These trips take place on the arms for the purpose of disclosure.

When we took him to the floor, to let him act as he wishes. Sniff, do not force him to go in a certain direction, let him dictate the pace. Remember that we are now at Quest for training and discipline. The purpose of the uneasy positive and joyful experience. Positive and exciting encounter with the outside world and providing personal space free and safe conduct (very important when it comes to education needs below).

It is important for me to say, you try to walk with your puppy will continue until approximately 30-40 minutes, because as I said above, it takes them a while to get used to the environment, bring them a sniff, get to know the environment and the place and if you have the ability, you take it back with a lot of grass.

Tips to educate | grow | behave with your new dogs:

- Puppy training: AS I SAID ABOVE!! never, never hit a dog, let alone a puppy. Everything you want him to learn learn it in a positive way. Every time he does something good has to praise him enthusiastically while giving positive reinforcement, "Good dog! Genius! Well done!" Snacks can also be used as positive reinforcement. Remember: Dogs learn through the "Conditions" - are studying the form of "if ... then ...", but they have no long-term memory. In other words, if you return home and find your puppy ate your couch and start hitting him and yelling at him, his lesson will be: "If ... my girlfriend/wife/husband/boyfriend or what the fuck ever come home, so ... I'm getting." Couch did not even enter into the equation. Conversely, if the puppy will pee in the garden and her adulation, the lesson will be: "If ... I pee in the garden, so ... I get pats and hugs."

- Leaving your dog/puppie alone:

So, people who work, earn a living, there are family events, a friend's birthday or any other occasion.

We will have to leave the dog alone, a dog is not a child can order a babysitting service.

In such cases, your dog will cry (I'm pretty sure), and apparently when he grew up he pops the door and scratch her that wants you return, therefore it is unpleasant to dogs but leave them no choice.

I personally recommend you to make them feel good, or at least try, buy them a toy ..

It can be a doll, a chew toy, bone, all kinds ..

He slowly gets used, the first departure dog cry, you feel really bad, but to encourage the dog, just before going to encourage him, give her a treat or a kiss and say a few good words let him know you still come back.

Because as I said, you have adopted dogs have always been alone and had those cases left them.

So very simply buy them toys, or anything else they can play with and before you leave the house very simple to say goodbye to them and encourage them as I recommended.

- Dog Location:

So, it's more designed for puppies than in dogs but there is also nothing that related to large dogs.

Bringing your puppy home, good for you Brusk proud of you and want to kiss you ass (JK).

Your puppy's location, I highly recommend that you place your puppy next to you Have a good viewing angle to watch him occasionally.

So that, when bringing a puppy home, I would recommend you do not put your puppy with you in the same bed very simple reason, puppies are very active and curious, they shift much and as soon as you put them on the bed can fall asleep or forget about them and they can fall and break a bone.

Bones of the puppies are very delicate and I ask you to act carefully with their location.

Quite simply I would recommend buying a bed or kennel to live (that's what I said to be designed for dogs and puppies too), and put them in the name and location of perspective.

Once you have bought a kennel or bed, they put a pillow / blanket to have a comfortable bed, very important!

- Food:

For food, it is designed for both residential and again and dogs below.

Food for puppies, kittens brought the home, it's time to educate them dog food.

There are people who let their dogs eat meat and then directly to the dogs practice and it simply refused to eat the food of dogs, this is really a waste, and really not healthy!

When you bring the dog home, you buy a package of dog food, puppy food, I recommend buying a soft, eg, dog food boxes, dog meat boxes.

If you bought already dog food normally, not bad, to be disgusted, very simple, take hot water, place on a plate with food (not to the words of the way !!) and after about 2 minutes (maybe less) the food will be very soft and pleasant to eat your puppy.

So that way, your dog may eat meat no problem at all, but like I said Give your dog get used to the first regular dog food.

Again, your dog may eat meat, cheese, fruit vegetables (very healthy).

I recommend that you do not let your dog eat sweet things like chocolate, cakes and cookies.

This can cause it to worms and very rare cases I read online that dogs died because of such things.

So just avoid!

The same also fish, my dog's vet advised me to avoid giving the dogs eat fish because it is healthy for them and there were deaths. (Including tuna).

- Shower for dogs (even puppies):

Dogs love to shower with warm water.

So basically this dog shower very simple thing but new owners I put this really short.

Before the dog's shower, check that you have soap designed for dogs, without this soap do not shower your dog.

Dogs can be a bit disturbed that the shower is probably their first shower or shower after a long time without a shower, so I did not really cope with it.

In case of puppies, kittens really have bathe carefully and gently rub the soap really slowly and pleasantly feel comfortable, they do not put soap on the face in any way why they would not enter the eye.

When you have finished bathe the dog, wipe it in one quick wipe to no water will run, and then just let him be free, dogs shaking themselves a lot so I recommend that you keep a distance so as not gonna get wet.

Dogs disclaim, rubbing on the floor and rub your body all over the place so they will be dry.

The smell of the dogs after a shower can be unpleasant and that's why I recommend you buy a perfume designed for dogs if the smell of the soap is no longer a dog's body.

- Dangerous food for dogs:

So, i made a quick search on google and find out those dangerous food for dogs, do not let them eat it, its not healthy - Mushrooms, pastry, onions, grapes, sugar, garlic, potato, chocolate, alcohol. Its will not kill your dog i mean its can kill but if not it will hurt him.

so avoid please, thank you brusk love you.

- Ticks and fleas:

There are different types of market shampoo Flea and Tick, and can be used according to the instructions (but remember that the shower is only recommended every few months).

To avoid discomfort from you and from your dog, and avoid excess showers, it is highly recommended to use special ampoule and collar against ticks. You can also find natural remedies.

In case you have found a tick on a dog, do not uproot planted! Some of the tick may remain in the skin and cause infection. Instead, she squirted some oil and paraffin. Within a few minutes you can easily remove it.

- Dogs body language:

- You are going to vacation?:

Going to vacation and wondering what to do with your best friend?(dog ofc DA), There are several options: doggie (look like that run by people who know and love dogs, and ensure every dog have his own room, yard game, and hiking and above all safety, ie, a perimeter fence hermetic), boarding home (a person who host few dogs on his home, for a fee). If you choose a pension, it is important to visit the dog at least once together. If you're vacationing in the country, there are many dogs hosts BB - you can plan their holiday so the dog could join you and relax you.

- Haircut

Because there are many different types of fur, suitable for different types of brushes and require different types of hairstyles, you should consult a professional dog school - and definitely do not try to tell the dog yourself at home. Called haircut of people are not suitable for dogs, and too close shave Poor dog; The fur protects the skin from sun damage and the cold, so in the case of fur shaving Several dogs have to ask your leave at least a centimeter of it (at the same time ask him not to cut his mustache - the dog needs it).

However, in the case of development dreadlocks or accumulation of dirt in the ears, genitals and anus, is definitely possible to cut the fur yourselves. Use blunt scissors (nail numbers of infants, for example) and do so very carefully.

Thats it guys, if you have any more questions please feel free to ask me.

Took me LONG time to write this, i really hope that i teach you something and you learn something from it and i wish you the best time with your dogs !!

My ponch - Spoiler ([Click to View](#))

And also thank to [TopKekeroni](#) who inspired me to make this guide :D

TheVBScripiter - January 25, 2017, 12:25 pm

I seen the dog-image before, it's very useful & true.

Although I'm a huge dog lover, I just feel like you know everything about them.

You got a lot of experiences and you know how to explain things well, thank you for this thread ?

TopKekeroni - January 26, 2017, 5:16 am

Just got a puppy a few days ago and this has seriously helped me, thank you for making such a HQ thread! :)

Kiss Panda for me

M?xim - January 26, 2017, 5:39 am

Much better formatted now. Looks good.

@OP:

You improved your thread a lot haha, glad to see that there are this many dog lovers here. ?

?Dominate - January 26, 2017, 5:59 am

There's a typo in there Brusk, look closely.

On topic, thanks for making this thread. I plan on getting a dog or cat soon, still deciding when and who to get.

On topic, thanks for making this thread. I plan on getting a dog or cat soon, still deciding when and who to get.

Yea i know, my english is not the best sadly :(but i tried my best at doing this one.

Also, about that you want to get an dog, let me know here or in PM what dogs you have in mind and we can discuss and i can suggest you :)

TheChi?f - January 26, 2017, 9:03 am

Nice thread Brusk. This will help me in the not-so-distant future.

Confound - January 27, 2017, 4:13 pm

Goddamn. Great guide, although I must say I am pretty disappointed as I have a guide that's 95% written about the same topic.....

You need to work on your grammar though. It's all over the place.

A P P L E - January 27, 2017, 5:08 pm

Awesome guide! Anyone thinking of getting a dog or is already a dog owner should read this. Thumbs up!
