Thread: [Need a Bot created for a MOBA game](#)

pinarofl - January 26, 2017, 6:28 am

Hey guys

I cant seem to post this in the market place as I need to have a positive score, I am not sure if this is the right place (hope it gets moved to the right place if it isnt and my apologies if it isnt)

Please read the whole thing before posting you can do it because this isn't a task for the weak minded, this is a very big tasks as it will require a lot effort, think this carefully before saying yes or not.

So i want a bot created that is similar to the following bot of legends

Before continuing go to YouTube, go to the website and search everything you need to know about the product, as you will need to understand what i need before I say yep okay lets do it.

Okay now that you have some idea on what bot of legends does, I need something similar to that functionality for Heroes of the storm

Now i dont need the login or i am not going to sell this product its just for personal use so getting the functionality of the bot of legends is what I am looking for, not the capabilities of having other people script for me or anything like that, so think bot of legends on its own, standalone version, used for personal use and has a library of scripts available.

The most important thing is it has to be able to inject into the game in a secure manner so its not a joke and i dont want this to be taken lightly,

I am looking tirelessly for someone that can help me

there has been so many attempts at trying to scam me its not even a joke

I am getting sick of it, I just need something and am willing to pay.

If you can help please reply.
