Thread: [10.2 Jailbreak Beta released.](#)

Larsenpower - January 26, 2017, 6:53 am

I've seen a few people asking about this lately. There has now been released a Jailbreak for iOS 10.2

This video explains it all.

[Video: <https://www.youtube.com/watch?v=72O7R2-yxLM>]

wit - January 26, 2017, 6:54 am

Don;t have time to watch the video

But the jb is open source rn and VERY unstable. would recommend waiting for a final product

CASTIEL - January 26, 2017, 6:55 am

As Maslow stated this is a unstable beta version of a jailbreak. Do not use this jailbreak unless you know what you are doing. Else please wait for the full release.

(Jan 26, 2017 01:27 PM)xadamxk Wrote: [\[CITE\]](#) I've been on it and haven't had issues with the JB itself.

The only issue lies with incompatible tweaks.

Yes this is more stable then the previous Yalu that was only available for 10.1.

It is still advised to wait for a stable public release which i think will be just after the weekend as the JB is already reasonably stable but Luca just needs to test it on 4K devices (64-bit devices e.g iPhone 6)

Mom - January 26, 2017, 7:16 pm

It's actually the Alpha of the Jailbreak, but yes, it has been released.

Excited to see that they finally released something. Now we play the waiting game for the tweaks to be updated.

EDIT: Didn't know this doesn't work on the iPhone 7 Plus yet, damn.

The Yalu jailbreak for 10.2 will never support iPhone 7 and iPhone 7+. If you want to jailbreak you need to be below 10.2 on an iPhone 7.

Should I update from 10.1 to 10.2?

SIM-2090815 - January 27, 2017, 9:03 am

(Jan 27, 2017 10:02 AM)Medd Wrote: [\[CITE\]](#) Should I update from 10.1 to 10.2?

Yes you should, it is always advised to stay on the latest Jailbreakable firmware.

EDIT: ONLY IF YOUR ON A 64-BIT DEVICE OTHER THEN THE iPhone 7 and 7+

Sus Az - January 27, 2017, 9:06 am

fuck that,

its unstable. Just wait til the final version to be released. Won't be long.

Mom - January 27, 2017, 9:28 am

(Jan 27, 2017 10:06 AM)Sus Az Wrote: [\[CITE\]](#) fuck that,

It may be unstable, but we're close enough to the actual jailbreak, if mobile substrate is supported in this version of Yalu, then we know that Luca tedesco will be releasing it very soon, just sit tight, and those people that gave out their shit or whatever it was, I'm not sure what it's called, but it has helped him, and will cause him to release it quicker than expected, and he is working with another IT guy, so he has some sort of help, and he's not a 1 man team anymore.

Just sit tight everyone. I can't wait for the Gamma version of the Jailbreak though, that's when I'm going to upgrade, and if I mess up, I already have my SHSH2 blobs saved, so I can downgrade at a later time.

:)

debug - January 27, 2017, 9:37 am

Never use a non-stable jailbreak. So stupid.

Mom - January 27, 2017, 10:10 am

(Jan 27, 2017 10:54 AM)xadamxk Wrote: [\[CITE\]](#) It is an alpha version but it runs perfectly fine.

The only buggy aspects are the tweaks that aren't supported by iOS 10.

Yeah, that's the only problem, really.

Like many youtubers, and Luca himself have said, it's only for developers for now, to get the tweaks out, most likely.

SIM-2090815 - January 27, 2017, 7:07 pm

Many reddit users have said that its very stable but I feel many are just dick sucking tbh.

Such as:

"I love how smooth it is, my 9.1 JB was slow compared to this one"

iNk. - January 27, 2017, 9:14 pm

R/jailbreak

Is literally full of dick riders that don't know what the fuck they're talking about 95% of the time.

Regardless I hope 10.2 keeps getting signed at least until a stable JB comes out so I can finally update my iPhone lol

SIM-2090815 - January 28, 2017, 4:50 am

(Jan 27, 2017 09:41 PM)xadamxk Wrote: [\[CITE\]](#) I actually agree though.

I don't know if it was iOS 10 that sped things up, but it does seem a lot faster to me.

Before I went to iOS 10.2 a few days ago I was on the 9.3 JB and over time it did become quite slow now I'm not sure if that is due to tweaks or what but i agree i feel iOS 10 is much smoother and sleeker itself so I hope a JB runs nice and smooth on it.

St00ner - January 28, 2017, 5:49 am

Thanks for a vid! I'll check it out. Can't live without jailbroken phone...

Student96 - January 28, 2017, 12:22 pm

Wow Wait. I thought there was only going to be a 10.1 JB. I am on 10.2(14C92). This mean a JB is coming for this? iPhone 6 btw.

SIM-2090815 - January 28, 2017, 1:30 pm

Yes but we are waiting for Luca to test on the iPhone 6

qwertyoruiopz said so.

XeCheats - January 29, 2017, 4:07 am

does this work on the iphone 6 plus

not the 6s version?

because I have been waiting for it to be supported

The words of our saviour Luca Todesco my friend?

gwoxie - January 29, 2017, 6:29 am

Just wait, why the rush? I would rather have a stable version instead of having the first release that can be full with bugs.

It won't take longer then some days so just calm ur asses down.

Larsenpower - January 29, 2017, 8:33 am

Calm your asses down? - What kind of attitude to enter a thread with. The thread is just informing people that it is now possible to jailbreak.

Why are you taking my reply so serious, i'm just saying that if you wait a bit longer then there will be a more stable version of the jailbreak. ?

yes I'm currently jailbroken on my 6+, check my thread and you'll see what you can do to jailbreak since support has been added for all 4k devices (64 bit)

J?k? - January 29, 2017, 11:38 am

Yeah, I've made a thread about it, and stated that Beta 6 has came out, I'm also using it, and it's not crashing as much as I used to

astano - January 30, 2017, 9:14 am

I'm waiting patiently for an iPhone 7 jailbreak, I am on iOS 10.1.1. I won't spam his twitter to wine about it like most idiots do -_-.

He is able to jailbreak i7 I think but he is just waiting till its stable enough, because when it goes wrong on i7 there is no going back.
