Thread: [Battery Report & Energy Statistics](#)

motherfawker666 - January 26, 2017, 7:23 pm

This script was made so that you could easily generate a battery report / energy report and have it automatically delete itself afterwards. This script can be run from a USB drive as well. If you are having battery problems on any laptops / tablets running Windows these reports will help you get an easy grasp on what is going on. I hope this helps someone :)

Code ::This file detects which version of windows you are running
::and dynamically chooses the appropriate way to view battery
::and energy related information.

::
::It then automatically deletes any files it generated and exits.

People here really have a problem with scripts that are practical.

gogglebot - January 28, 2017, 8:53 pm

This is so good, the presentation is amazing, and now I know how screwed my battery actually is! :D
Hope you stick around here!

So damn true. I'm sorry you didn't get any recognition on this.

Hi motherfawker666 ?

Very nice script ! i like it and i will use it with your permission if you don't mind ! ?

I tested on my windows 7 (32 bits) and it worked like a charm

Very useful script ! ?

Thank you for this nice share ! and don't stop to share other useful scripts like that ?

cheers ?
