Thread: [2FA Options/Alternatives to a mobile device](#)

Disparity - January 29, 2017, 4:05 pm

Are there any other options than using a mobile device for 2FA? Any desktop applications or anything? I want to have it enabled, but as of now cannot use my phone for it for various reasons.

You can install the [Authy](#) Chrome web app and set it up there.

You could also use one of those fancy U2F usb keys. I just ordered one for myself the other day. Once set-up, you just plug that bad boy in and press the button to authenticate. No codes.

So they do work on here? Does it work well? Any complications or anything?

Ah, I thought you were talking about them in general. I haven't tried using one with HF- I don't think they have support for it. But I'd be happy if someone proved me wrong.

Well there is a way but you need a mobile device only for the first time while registering and rest of time there is no need at all. Ohh well the product is Appspicket , check it out. Concept behind this technology is to provide 2fa in one step thereby removing all hurdles we all face in other type of 2fa typing passcodes etc.
