Thread: [\[Kinda LEAK\] - Nethunter Nightly build with kernel-integrated Nexmon by BinkyBear](#)

Cr33d3nce - January 31, 2017, 8:48 am

Not sure if it was here, but I thought this might be useful for beginners and amateurs.

This is a Nethunter build named NethunterOS for Nexus 5 (hammerhead) developed by BinkyBear and (maybe, but likely not) private.

It already has Nexmon integrated, so all you gotta do is to put your BCM chip in monitor mode by typing "source monstart-nh" and "source monstop-nh" to put back in managed. I'll include a simple script called "wf" which you can use to automate this process.

Dedicated to all people experiencing Nexmon problems with Nethunter.

Hope u guys like it like i did.

NethunterOS:

https://mega.nz/#!dswgBQqC!ILsL6aucEFmTOAMqRw0dAUAjzMOLtzyQ3cY0_e6KkmM

wf: <https://mega.nz/#!Yh4H2aBR!EWQT5rgIxxY94HPi8J50mcVU9VFA0m60LnDF2DIYZaE>

Gotta remove () in links also.

Oh, BinkyBears work is not only useful for beginners and amateurs ;-)

Link to his introduction (Nexus 5/Hammerhead and Nexus 6P/Angler only):

<https://gist.github.com/binkybear/8f0f4eee292d5263372f47c3c3ed08e>

He is linking to Multirom. I wouldn't use Multirom with 16 or 32 GB.
