Thread: [cant change Default Index.html](#)

Warrio? - January 31, 2017, 8:58 am

Hello everyone,

I have Lamp installed on a VPS,

I want to change the default index.html to index.php but no success.

Here is my Default.conf setting for Apache2

Code <VirtualHost *:80>

ServerAdmin Soft@live.com

ServerName mysite.com

ServerAlias http://www.mysite.com

DocumentRoot /var/www/domains/mysite.com

DirectoryIndex index.php

CustomLog /var/www/logs/mysite.com.log combined

ErrorLog /var/www/error_logs/mysite.com.log

<Directory /var/www/domains/mysite.com/>

Options Indexes FollowSymLinks MultiViews

AllowOverride All

Order allow,deny

allow from all

</Directory>

I also tried to redirect index.html to index.php via .htaacc via 301 redirect

Code redirect 301 /index.html http://www.mysite/index.phpbut it has no effect.

can you guys tell me what is forcing Apache to load index.html ?

Do

Code sudo nano /etc/apache2/mods-enabled/dir.conf
and move index.php to before index.html

and move index.php to before index.html
Already did that.. I removed the index.html from there.
There is only index.php.

still looking for help,
thank you guys

Modify your 'httpd.conf' if you want to achieve this, I did a quick Google search and pulled a StackOverflow article.
