Thread: [HTTrack Cloning website](#)

SIM-1648682 - February 2, 2017, 6:21 am

Whatsup,

I know it is possible to rip a website with HTTrack but is it also possible to copy a website like

<https://csgoreaper.com/>

And have it shown on my website as there are actually people gambling? Like having people shown on my page typing in chat etc.

uppy - February 2, 2017, 7:31 am

this is script. not only use httrack. eg. you buy this script: csgo.network

That is not what i mean, i dont want the script and all...

I just want my website to show activity while it is not actually active.

HTTrack was developed to
Copy the entire website
For backup purpose !!

Everything you need is on there and ready mate, just go to view-source:<https://csgoreaper.com/>
then copy paste it all, then grab a copy of all the other files hosted like
view-source:<https://csgoreaper.com/assets/js/timer/HTimer.min.js>
