Thread: [Vulture.py | Upload Chrome passwords to Pastebin](#)

Ensky - February 2, 2017, 2:13 pm

Vulture.py

Vulture.py is small project I started, I got the idea from a reply in Piero-Bird's Chrome Scavenger, hence the name Vulture.

Somebody in the replies asked about a command line version, so I am delivering.

There isn't many features yet, but I'm always open for new idea. Feel free to leave a suggestion and it may be implemented, and you'll receive credit.

Vulture will snatch the Chrome passwords and upload them to an unlisted Pastebin paste, and then prints the Pastebin link out for you in under a second.

Prerequisites:

pywin32 (pip install pypiwin32)

GitHub Link : <https://github.com/george-arthur/Vulture.py>

Thanks to Piero-Bird!

You should work on formatting your code some. You have a ton of extra spaces that aren't necessary. Other than that, at quick glance, looks good.

Hey, cool expanding on my project! The code looks very clean.

As for features, maybe do the one thing I couldn't figure out, Cookie Recovery.

By the way,

I'm going to release a complete version of this myself, but with a FTP server upload functionality and possibly an .exe builder. Not sure if I'll include all of the features or not, as I don't want it being abused recovering some of the things it's capable of recovering. (including credit information)

Do you guys think this is a good idea? What's your input?

Thanks.

Yes, if it's capable, do it!

Thanks! It's still in heavy development so all suggestions are appreciated:)

The issue with pastebin is is that their API sucks so much, when it detects something which requires a captcha it won't post it.

(It's possible that over the years Pastebin has changed their dumb system)

If that's the case, I'll create a Ghostbin API and utilise that.
