Thread: [Want to get the new kabylake pentium but cannot update bios?](#)

The new kabylake cpus require to update your motherboard. This would be my first gaming build so I don't have a PC to update the bios now, so is there a way I can buy a motherboard with the correct bios installed on the cheap? I'm on an ultra \$400 budget so I'm looking in the \$50 motherboard range.

This is the absolute closest I could get to \$400 with a relatively okay GPU and a Kaby Lake Pentium.

Thanks. That motherboard fits into the budget just well. A bit strange the CPU is only \$62 on amazon.
