Thread: [P O S T I M G Censored](#)

Omniscient - February 3, 2017, 10:52 am

P O S T I M G (both .org and .io)

Their HTTPS is invalid. As such their URL is censored to avoid posts and signatures being used. Sorry, but I want us 100% HTTPS compatible.

Thank you.

Hoodie+ - February 3, 2017, 10:53 am

The title says # Censored

Omni censored himself, xD

Fluxify - February 3, 2017, 10:54 am

Haha, I noticed it too. But he already fixed it! ?

SoulZeh - February 3, 2017, 10:58 am

Just gonna have to wait for everyone to come on and be like "where is my signature or signature banned? WTF"

TheChi?f - February 3, 2017, 11:04 am

Those images/signatures were never loading for me, and it became pretty annoying. Their site doesn't even load on my browser, and thats probably the reason.

Thank you.

Omniscient - February 3, 2017, 11:12 am

Thank you.

Does the .io domain (I think the org redirects to io?) work for you? I have no problem opening the website from my phone.

Edit; Nvm, I'm stupid lol. I was trying postimage instead of P O S T I M G
Edit2: Seems like it's the same thing, I'm confused.

Omniscient - February 3, 2017, 11:27 am

(Feb 3, 2017 12:19 PM)Fluxify Wrote: [\[CITE\]](#) Does the .io domain (I think the org redirects to io?) work for you? I have no problem opening the website from my phone.

I tried both, same result that it's not secured by the browser. Could be either a bad or expired certificate. Maybe self-signed. In any case neither Chrome or Firefox recognized the images as secured.

Are you able to see which certificate they use? For some reason, I can see they use COMODO and it's valid for me. I get the green lock icon on Opera, Firefox and Chrome. ??

I'd but their site never loads for me.

J?son - February 3, 2017, 11:31 am

People should only be using imgur, imho

Cammy - February 3, 2017, 11:46 am

(Feb 3, 2017 12:31 PM)Jas?n Wrote: [\[CITE\]](#) People should only be using imgur, imho
Imgur compresses your images if they're past 2Mb or something, which makes it a shit upload site if you have thread designs
Just set up your own hosting site fams

Mr. Robot - February 3, 2017, 11:49 am

That site keeps exif data anyhow so some people slip up with they opsec and give up their computers name, gps location and more. At least imgur strips that.

I honestly thought this thread was going to be about that silly user that joins and makes his username "posting" blah blah..

Thanks Omni for keeping the site secure.

Seems they got a new cert? Code Monday, 9 January 2017 1:00:00 p.m.
(Monday, 9 January 2017 12:00:00 a.m. GMT)[

Copywriter - February 3, 2017, 11:51 am

So what's the best site to upload high pixelated pictures?

?now - February 3, 2017, 11:52 am

Nice implantation omni, those siggys were so annoying lol

DevNet - February 3, 2017, 11:52 am

Question: is HF HTTP/2 ready?

Copywriter - February 3, 2017, 11:53 am

(Feb 3, 2017 12:52 PM)?now Wrote: [\[CITE\]](#) Nice implantation omni, those siggys were so annoying

lol

What are you talking about?

Did you not read the thread thoroughly?

Fluxify - February 3, 2017, 11:54 am

(Feb 3, 2017 12:52 PM)DevNet Wrote: [\[CITE\]](#) Question: is HF HTTP/2 ready?

Yes, HF is HTTP/2 ready.

<https://tools.keycdn.com/http2-test>

?????s? - February 3, 2017, 1:01 pm

Oh wow

<https://hackforums.net/showthread.php?tid=5542086>

I was just about to post a thread on why my images in my threads and sig are gone.

Guess i have to use imgur now -_-

Eagle 95 - February 3, 2017, 1:01 pm

Better bookmark this. It'll be needed to link on many threads in the next few days. ?

Thanks for letting us know.

Varane - February 3, 2017, 1:24 pm

This explains why some of my threads were broken.

SIM-2015410 - February 3, 2017, 2:12 pm

Makes it annoying for the things like puzzles (e.g. Think into Royalty) which use postimage specifically because it doesn't remove the exif data though :')

ze-slade - February 3, 2017, 2:16 pm

Interesting change, Omni. Surely someone knows of a better alternative that will catch on soon? I personally prefer imgur since it's super simple.

Copywriter - February 3, 2017, 2:17 pm

Thing is, it reduces quality since it compresses anything over 2 MBs

McDolands - February 3, 2017, 2:18 pm

Well i have to update all my threads...

ze-slade - February 3, 2017, 2:18 pm

(Feb 3, 2017 03:17 PM)Bombs Wrote: [\[CITE\]](#) Thing is, it reduces quality since it compresses anything over 2 MBs

Oh, well I don't tend to upload anything too high quality anyways, Any websites I can use if I do?

b?xxy - February 3, 2017, 2:19 pm

Gyazo and Imgur are superior anyways.

Mr. Robot - February 3, 2017, 2:43 pm

Agreed, oh well shit happens.

Can still upload files inside our avatars.

MeltyNet - February 3, 2017, 2:46 pm

Never noticed that those urls don't have HTTPS, but it will for sure keep the site HTTPS, good going :)

Patzan - February 3, 2017, 4:22 pm

Those are very shit sites and this move would be helpful by avoid broken or glitched img's on HF.

TheVBScripter - February 4, 2017, 6:20 am

Thank you for pointing that out.

Did you (perhaps) deleted our signatures?

I noticed, as well as another Ub3r member (so not any non-upgraded issues), that our signature got deleted.

Anyway, nice to know that we shouldn't use that site anymore. ?

J?son - February 4, 2017, 6:21 am

Yes He removed avatars and signatures that were not using HTTPS

M?xim - February 4, 2017, 6:22 am

Everyone should just use Imgur as image host.

TheVBScripter - February 4, 2017, 6:23 am

(Feb 4, 2017 07:21 AM)Jas?n Wrote: [\[CITE\]](#) Yes He removed avatars and signatures that were not using HTTPS

Thank you, its clear now.

You look a lot like Hash G. profile haha I was confused for a minute.

Malicious Intent - February 4, 2017, 6:28 am

Well .. RIP my sig haha Going to reupload elsewhere. Thanks for the info.

J?son - February 4, 2017, 6:28 am

(Feb 4, 2017 07:22 AM)M?xim Wrote: [\[CITE\]](#) Everyone should just use Imgur as image host.
It don't work for me

TheVBScripter - February 4, 2017, 6:40 am

(Feb 4, 2017 07:38 AM)McDolands Wrote: [\[CITE\]](#) It don't work for me
If your photo is (example) imgur.com/OkHFB32 then you should use Code
[img]imgur.com/OkHFB32.png[/img] as tags.

McDolands - February 4, 2017, 6:47 am

My first thought. I only used postimage. I guess imgur will have to do. But all the old Think threads
are now forever dead xD

ven0m - February 4, 2017, 8:19 am

Thank you for your tireless effort to make the forum more secure. Much appreciated. ?

@Jupiter - February 4, 2017, 8:21 am

Hello postimg.io
Postimg.org

Yin Yang - February 4, 2017, 9:58 am

I m g u r doesn't seem to be working either

J?son - February 4, 2017, 10:14 am

(Feb 4, 2017 10:58 AM)Yin Yang Wrote: [\[CITE\]](#) I m g u r doesn't seem to be working either
you need to use a HTTPS direct link to the image

Evanescent - *February 7, 2017, 11:14 pm*

Had the problem and now shifted to Imgur.

He B TeMy - *February 8, 2017, 10:59 am*

Good. This piece of shit service who needs me to allow 3rd party domains to view an image that's not a direct link but a parent link deserves no business.
