Thread: [Using hydra to crack gmail password](#)

cats_lover - February 3, 2017, 2:50 pm

Hi, I was about to use hydra to brute force a gmail account but I was wondering if after so many years gmail team has not implemented some kind of security locking on it.

It is still possible to make a massive list attack without being blocked or without gmail notifying the victim?

Thank you

-_-Error 404-_- - February 3, 2017, 2:58 pm

No thats not possible using hydra ,
you will need more advanced tools
