Thread: [Please help me to get unlimited LTE](#)

giggio - February 6, 2017, 9:48 am

Hello, could someone please help me to get unlimited LTE traffic?
I'm living in Italy and internet is crap here.

With ADSL my maximum speed is 1,5 Mbps. And as soon as start rain internet go off. Sometimes this happen on nights too.

Internet is terrible here.

Then few days ago I found LTE connections. My provider offered me 22 GB and it was like a dream. My speed was 34 Mbps and no problems at all during rain storm... It was like a dream but I finished the 22 GB on 7 days.

Buy other traffic is overpriced now imo. 5 € for 1 GB. Pretty shit I think.

So I would like to buy this offer and then have unlimited LTE traffic... I read someone (from my same provider) saying I need to use a VPN.

So I bought a OVH VPS and then setup the VPS for using it as VPN.

I use my Smartphone as wifi router to connect my home PC.

If I connect my computer to my VPN it doesn't work. The provider see how many traffic I'm using.

If I connect my smartphone to my VPN, then it seems this make a conflict with the wifi routing because my computer cannot connect anymore to my phone. As soon as I disable the VPN connection, my computer is able to connect to my smartphone wifi routing fine.

Could someone please help me to fix this last thing? I don't really know what should I do for connect my pc to my smartphone that is using a VPN connection...

please help me with this dream... thank you

Your provider should just have a plan that you could get for unlimited data. I (living in the U.S though) have never heard of a provider saying you need a VPN you could call for more detail I would like to help figure this out with more detail about there plans and what they said.

giggio - February 6, 2017, 11:32 am

Nope, here in Italy doesn't exist a provider that offer unlimited LTE data.

Exist offer like 5€ = 1 GB data

or

10 € = 2 GB Data

or

20€ = 4 GB Data

it's hard to find offer with more than 4 GB.

This why I should use a VPN... VPN should hide the real traffic... but I don't know why if I enable the VPN that my computer is unable to connect to my smartphone...

webdev77 - February 7, 2017, 7:57 am

VPNs don't particularly reduce data usage. Your ISP will still know how much data you are using with or without a VPN.

Deeled - February 7, 2017, 11:34 am

Yea as webdev77 has posted, VPN does not hide nor reduce your data usage, it only hides your activities... Tbh I have never seen any methods to get free unlimited data on a carrier. Maybe you should try other mobile internet service provider which might provide you better connectivity?

As far i know m some vpns will bypass da the speedcap of ISP,

LS RX7 - February 10, 2017, 9:20 am

There is that guy selling phones on here that have unlimited data.
