Thread: [<input type="hidden" to <input type="text" exploit](#)

step - February 6, 2017, 12:48 pm

There is website miksike.ee what my school uses and my friend found exploit basically when he changes `<input type="hidden" id="txtKokkun" name="txtKokkun">` to `<input type="text" id="txtKokkun" name="txtKokkun">` there comes a weird box as seen in here [prntscr.com/e5d14b](#) and he can put any number to it and press enter then he gets very much points at end but it's not working for me. What i'm doing wrong?

Edit: This website in english miksike.eu

Why ask here ? I think this belongs in the hacking sections.

Ask here "Website and Forum Hacking"
