Thread: [Best Removal Tools](#)

KyFu - February 9, 2017, 10:54 am

Not necessarily looking to install many programs, looking for portable virus removal tools that are actually worth while.

What are the best tools out there?

I use ADWCleaner, NoBot, and RogueKiller so far. Just looking for other scanning and removal tools for my collection!

Thanks in advance!

farbar recovery scan tool is my only suggestion

radicalxfrosty - March 3, 2017, 7:02 am

Your own hands, the most simple RAT's are in %temp% or %appdata% ;)

I really like NoBot, it's very good at detecting malicious programs running in your system.

Requires training in order to create fixlists however.

Malwarebytes Anti-Malware, Hitman Pro, Kaspersky TDSSKiller, and Emsisoft Emergency Kit should be enough. Also, use an antivirus/antimalware program for active protection such as ESET or Kaspersky.
