Thread: [NanoCore - Remote Desktop Protocol Guide and Support.](#)

\$lick - February 9, 2017, 3:01 pm

This guide is for [NanoCore](#).

Remote Desktop Protocol
What does it do?

Remote desktop protocol is actually built into Windows. It allows you to control a user on a specific machine.

How do I use it?

(Make sure you have [a reverse proxy](#) running before starting this NOTE: You don't need to do the browser part for this to work)

You're going to right click on your client and hover over 'Network' followed by clicking on 'RDP Manager'. (or RDP Manager -> Account Manager if on beta)

You will be greeted by a little box that will have a 'Install' button ready for you to click at the top left corner. Click it.

You'll see the title of the box briefly changes to 'Installing...' before displaying this.

Right click --> Create account and choose a username/password followed by hitting create.

Now enter the details you wish to use on this account.

You'll now see your username/password displayed in the collums below. (don't worry if the password appears to be longer than you entered)

Next up is downloading Proxifier, you can do so from here: <https://www.proxifier.com/>
Open it and copy what I'm going to show you down below. Hold on to your tits cause this might seem confusing. Follow the numbers from 1 --> 3

Now that you've done the following you're going to hit 'OK' at the bottom left of your box.
It'll close that box, bring back the previous one (which should now hold the info you entered) which you will also click 'OK' on. You're now ready to start the RDP.

In windows search utility type in 'Remote Desktop Connection' followed by opening it. You'll get a box that looks like following.

Fill in '127.0.0.2' and hit connect. If everything was done correctly you should now be remotely controlling your clients computer!

You've now completed the RDP guide. Should any issues have arrived during this please head over

to <https://nanocore.io/support/> to ask for official support!

Very nicely explained. thanks

urbandesi - February 18, 2017, 9:37 pm

damnn so fcuking good man

magichack3r - October 3, 2017, 12:50 pm

Someone has the RDP plugin of nanocore that can share it. It would be useful for some tests. Thank you.

ImSimplyNameless - October 4, 2017, 11:41 am

I don't think using nanocore is that good of an idea

Flokki - November 25, 2017, 1:10 am

anyone have a this plugin? i need rdp plugin

Pootje - November 25, 2017, 2:51 am

I need the RDG plugin to!

You can't use those as I know, NC is out of service.

NanoCore is dead mate, the developer got 33 months in prison.

ahytokot2k16 - March 29, 2018, 4:46 am

Where to buy? The site does not work
