Thread: [RDP scan/brute tool brutik](#)

RAGERACER - February 10, 2017, 3:17 am

hi there,

I have a problem. I use this tool called Brutik to get some fresh rdp.

Now i used this tool some time ago and it was working perfect.

This tool uses VNC Authentication scanner 4.1.1. You can paste your ip range list in the tool itself and mark "start scan after start" press scan and it opens a cmd window and it will scan for open rdp ip's.

So basicly just put in the ip ranges in the tool start scan and Brutik will start brutforcing the results of the rdp ip ranges scan.

Everything work perfectly it start scanning. My problem is i never get any active rdp ip's with this VNC scanner. I used this same tool like one year ago and it worked perfect. Back in the day it worked this same method for scanning rdp ip's. Now i never get results..

I scanned like 5 different country's and no result at all. Scanning the whole night.

Now i run a windows 10 home machine and i run this tool Brutik in WinXP sp2 compatibility modus to register the dll for the tool to function. Or it won't register the dll and give one error.

I get my ip ranges from the following website:
countryipblocks.net/country_selection.php

Back in the day those ip ranges from this sites worked perfectly.

Now i don't know why i don't get any results with this realVNC authentication scanner 4.1.1 that Brutik uses.

Here is an screenshot of the vnc scanner:
i.imgsafe.org/da3ec64ee1.jpg

Because this is the only why i know how to get some fresh rdp ip list to start bruteforce some rdp's.

Maybe someone know one other way to mass scan for open active rdp ip's. Or maybe there is something in windows 10 blocking the vnc scanner to work properly. It scans my ip range list but never find active rdp ip's. This is strange because t should get some results if you scan the whole ip range list from some country. I scanned allot of ranges and no result at all.

The tool Brutik is easily found with google search if you like to try it. If it work on a XP machine for example then this is by far the most easy way to get some fresh rdp's. Or do you know some other tool that automate the scanning + bruting process..

btw i made a fast tutorial for using this tool:

you can find it here:

dumptext.com/EQCnaVPV

Hope you try it yourself and get some fresh rdp fast!

If you can help me please do.

I will not forget you when i got some goodies..

Thanks for the help in advanced and have a beautifull day!
