Thread: [Crunch generate wordlist of 123 + xxxxxxxx](#)

41phafr34k - February 11, 2017, 11:20 am

In the program crunch if I wanted to make a list of phone numbers and I wanted it to be

416 + xxxxxxxx

416 being the area code and the x's being the remaining 7 digits how would i input that into crunch to make me a full wordlist with all possible combos starting with 416?

Sheeple - February 11, 2017, 11:24 am

<https://hashcat.net/wiki/doku.php?id=maskprocessor>

Using this tool will be a little faster and easier

mp64.exe -o phonenumbers.txt 416?d?d?d?d?d?d?d

?d = 0-9

what

you just download the file, open a cmd prompt inside the folder, and type exactly what I said to type into cmd.

nothing to even build but oke

I have a feeling this program doesn't run on arch OSs.

Is it built for windows?

I did what you said with no success just errors in my terminal.

crunch 10 10 -t 519%%%%%%%%% --- this gives me the output i need thanks for the help though if you have an idea why I couldn't get the maskprocessor working give me a shout via pm, if not thanks anyways.

thanks anyways.What was the error with maskprocessor?

41phafr34k - *February 11, 2017, 12:56 pm*

it was a bash command not found error
