Thread: [\[NEW\]\[FREE\] 8 BALL POOL INFINITE GUIDELINE iOS TUTORIAL \(NO JAILBREAK \)](#)

Copywriter - February 11, 2017, 10:13 pm

I saw someone selling the damn method when it's public and free..
So anyway, to get this tweak/hack/cheat whatever you'd like to call it...

You Need:

- PC/MAC
- CydiaImpactor
- iPhone Charging Cable (USB to iPhone Port)
- iTunes Login Details

Now that you got what you need, let's begin.

1. Download Cydia Impactor and Launch it.

<http://www.cydaiimpactor.com/>

2. (Delete your original 8 Ball Pool app) Download the 8 Ball Pool iAP File - .iAP file is just like an .apk file, but for iOS

http://fileup.us/c06edab493d6ed60/8_Ball_Pool_by_Naeemjr_&_compiled_by_Amuyea_for_iOSGods.ipa

3. Connect your iPhone to your PC/Mac using the charging cord/cable

4. Log onto iTunes <https://appleid.apple.com/#!/&page=signin>

Go to Account

-Then Security

-Enable 2FA if you haven't already

-After Enabling 2FA > Click on "App Generated Password" and name it whatever you want, doesn't matter

-Copy the password/code, you'll need that for the next step.[/list]

5. Open CydiaImpactor if you haven't already, then drag the downloaded iAP file from earlier into the Window, just drag it in there.

6. Type in your e-mail <enter>, then DO NOT PUT YOUR iTUNES PASSWORD IN THERE, PASTE THE App Generated Password/Code from earlier.

7. You should see 8 Ball Pool on your phone now,

BUT go to Settings>General>Profile & Device Management>Click on your email and trust it.

You have successfully installed 8 Ball Pool with Infinte Guidelines!

Oh yeah, also there's a bunch of sites that allow you to download many other cool tweaked apps like modified Instagram, Premium Spotify and more.

PM me if you need help. :)

Post/reply if it worked, thank you!

Got past the problem it says complete but there isn't an 8 ball pool app on my phone
gyazo.com/a5975e028fb27c21abf5ebdb46ef239c Am i missing something?

Tried again got this gyazo.com/f24309cfd2be41bb8d90a5eabe55fb4f

It actually just gave me the spotify app. and I did the steps to trust that and it worked by the same developer maybe you put the wrong link?

Very nice looking man, although its already public.

- BTW its not iAP, its an .ipa file.

TweakBox method is much simpler. Thanks for the share nevertheless.

Yeah, TweakBox is definitely much more easier, but I used this method when it got patched.

Nothing really, it will just prompt you to follow the steps to get the App Generated Password I told you about.
