Thread: [facebook acc save doesnt output txt file with output](#)

mr_pedowbear - February 12, 2017, 8:26 am

hi
i wanted to make a simple program that takes my input and saves it in a txt file
sadly it doesnt want to work
PHP Code

```
<?php
name = input("facebook user name: ")
email = input("facebook user email : ")
password = input("facebook user password: ")
print (name,email,password)
fw =open('Facebook.txt','w')
fw.write(' \n')
fw.write(name)
fw.write('\n')
fw.write(email)
fw.write('\n')
fw.write(password)
fw.write('\n')
```

Ri?dle - February 12, 2017, 8:41 am

try adding fw.close() at the end

```
Code name = input("facebook user name: ")
email = input("facebook user email : ")
password = input("facebook user password: ")

print("Name: %s \n Email: %s \n Password: %s" % (name, email, password))

fw =open('Facebook.txt','w')
fw.write(name + "\n" + email + "\n" + password)
fw.close()
```

??? what was the point of this post

HFDone - February 12, 2017, 8:53 am

the point was to learn you that if you open file you need to close it if you dont close it you will open new thread as op asking why its not working

mr_pedowbear - February 12, 2017, 8:59 am

yeah I know that's why I told him to try it??? hello??

mr_pedowbear - February 12, 2017, 9:04 am

only problem that i have now that it does not make a txt file for me idk why xD

HFDone - February 12, 2017, 9:06 am

saying try means maybe while its not maybe its for sure which put you as guessing

Aveling - February 12, 2017, 9:08 am

The .txt file should be generated at the same directory where your script is located. Are you getting any error? Try manually creating the .txt file and see if the script updates the file?
