Thread: [Best Legit Aim](#)

SIM-1607106 - February 12, 2017, 10:19 pm

Looking for the best legit aim hacks that have an excellent combination of both aim and human like movement. I have used both Aimware and Aimjunkies and to be honest they feel like quite shit. I feel like there are much better programs out there.

Interwebz is an amazing legit hack that can also rage quite well.

Heaps of configs are available but you can make your own via ingame or the config cloud

do you find that cheap or expensive?

sn0wing - February 12, 2017, 11:17 pm

Chods cheats is the best legit cheat for csgo and that is a fact.

Good cheat but enjoy your ban shortly. They get hit more than a wife in an abusive relationship.

Interwebz is a good choice for legit cheating and also some rage capabilities for a p2c.

Though I suggest you take a look at a few other options aswell.

Such as RoyalHack, dopehacks, platinum cheats, R3, and Rogue(slotted/need to get verified first). There are others, but I don't want to make this into an essay. Basically, take every cheat you can find and do some of your own research. Don't just pick the first one someone recommends to you. Find people who use a certain cheat, and ask opinions from them as real people, not just people advertising their cheat. Get some friends who are cheaters, play in game with them and see their opinion, don't just follow a text saying what is good and bad. It's your accounts and your money, so choose wisely)

I have had used interwebz for over a year, and Rogue for about 9 months. I will say that in terms of aimbot, I think rogue wins. With rogue, I was able to use much more blatant settings, yet still remain fully legit. Also with rogue, I could use a combo of silent aim, slow aim, and RCS to form a very very strong comfig. For example, setting a RCS silent aim config on AK47, for crazy one taps and silent aim spray downs, where as interwebs I can only set like the first 1 to 2 bullets on silent aim and the FOV is locked on rifles.

For legit play, I prefer Rogue.RIP, the loader was detected before, but I believe the cheat itself wasn't. The coder battled that by offering free private loader builds to the customers.

As for myself, I went to a private cheat for extra safety of my main, but I will always recommend Rogue.rip as a very good slotted cheat. Interwebz is good also though

(Note: Rogue is \$25 per months, where as interwebz is \$20 a month. I think Rogue only takes bitcoin, and interwebz has multiple payment methods. Though rogue has a lifetime of \$125 I believe, and for me it was worth it since I've had it so long. I always use that on my smurfs now and private on my main, though I know a few people who use rogue on their main. Still as always, any cheat can be detected one day, so use with responsibility)

Last DT in october4 months, wow.

Going for a new record aren't we.

your cheat gets detected 2 times a year on average, that's indeed alot.

It's not aimware(15 in 3 years.?) but it's still high.

Royal is pretty much what you're looking for. Mby even r3cheats 'even tho their aimbot aren't all the

best, it's still pretty nice..

I want to see you run the most popular P2C and remain UD.

In no way am i able to do that, nor would i believe that many other would. But my statement still stands. 4 months is not long neither is 6.

If they go 1 year, then I would could see how you will call 'okay'. But in my eyes a good run on such a big cheat is what ArtificialAiming is doing right now. (wouldn't touch AA with a 2meter long stick tho.)

before september 13th we were undetected for 1.5 years as one of the largest p2cs available on par with aimware etc.

Hexui, bithax, cVision (if you set cVision to no rcs config) etc

There are a lot of legit cheats out there

Intermediate - February 13, 2017, 3:59 pm

Go with Hexui, that shit is lit

P3TER P4RKER - February 13, 2017, 9:56 pm

Im thinking about getting interwebs. Had them before but never did much. Chods got me banned.
