Thread: [Bypassing BIOS or Windows password](#)

Peroxide_ - February 14, 2017, 10:54 am

So the administrator acc at my school is locked with a password, I've tried to remove it with software I downloaded onto my USB but found out that the BIOS is also password protected. I couldn't find anything useful on here except to remove the battery or do something with the motherboard (not really sure it's the motherboard). My problem is that our computers at school are desktops and I can't really take out the hardware so I was wondering if there is some way to bypass BIOS password or Windows acc password.

The Crab - February 14, 2017, 2:03 pm

Not sure what Windows the computer is running, but I've bypassed both Windows 7 and 10 without any third-party programs. Just google it, it's well known and should be easy to find

Yes you can use kon-boot!

<http://www.piotrbania.com/all/kon-boot/index2.html>

?

xfreedom - February 14, 2017, 3:12 pm

You only need to access the bios if doesn't boot on the usb disk or on the optical drive before the hdd.

Let's say you want to use kon-boot on usb. You plug it in but it never boot from the usb.

Does it boot from a cd ? If that so, you still have plenty of options without any need to access the bios.

You can use a linux live cd to access windows file. You can either get the SAM file in order to try and decrypt the password using ophcrack or do the utilman.exe trick to activate the hidden administrator.

If it doesn't boot from the cd, then you need to gain access to the bios, and you could try the default password, plenty of informations of google depending of the brand or you can try basic password like 123456.

skelly76 - February 15, 2017, 12:36 am

Don't fuck with schools, telling you now.

I've searched google but couldn't find anything that solves my problem but I'll try and look a little bit more.

It's not booting from the CD, I've tried some basic passwords and also I've googled bios default passwords and tried them but had no luck.

I'm not trying to do anything illegal I'm just trying to get the pw so I can install some games and unistall some programs that are slowing the computer down and are so old noone ever uses them and since I can't do any of this without the administrator acc I'm trying to find the password out

y.flicka - February 15, 2017, 6:15 am

Dont fuck with your school trust me. Even if you are planning on not doing something bad the act of getting the pw is illegal and you can get fucked pretty bad

There is no way my teacher is going to know I got the password since our PC's are not monitored or inspected by the teachers. And with all of that I'm sure my teacher would be cool with me knowing the password but I can't ask her since she's the new teacher at school and didn't got the password yet.

Unless you're the IT manager or school staff, even knowing the password is considered a federal offence (in America at least) and can get you in a lot of trouble. Also, by removing software on the system, you're essentially damaging the system (even if it makes it faster)

Just don't fuck with school computers. There's no ifs, ands or buts. DON'T FUCK WITH IT

Unless of course you want to get expelled, have federal offence marks on your permanent record and some prison time with Big Bubba, by all means, go right ahead.

Damp - February 15, 2017, 10:55 am

Even if you're just installing games, this isn't smart.

I suppose you're doing this at your own risk anyways.

Slavoj Žižek - February 15, 2017, 10:58 am

I just pull the plug out while its running then start into safe mode, then I install tor. ez

__ZZ - February 15, 2017, 11:55 am

You could buy one of these password reset keys. Seems to work quite well.

amazon.co.uk/Password-Reset-Key-including-Password-Windows/dp/B01IA1AKNC/ref=sr_1_1/254-7420457-6514929?ie=UTF8&qid=1487188424&sr=8-1&keywords=Password+Reset+Key

misterbag - February 16, 2017, 1:21 pm

I assume the desktops are on al lock? Else you could have changed the jumper on the motherboard to reset the Bios pass x)

AnonOpz - February 16, 2017, 3:11 pm

Use Kon Boot it works a treat, as ive done it many times myself?

Pigeonty - February 17, 2017, 3:30 pm

dont do anything wrong in your school you will get banned or suspended and get a really bad review

This. You can get into serious trouble. I got away with it luckily enough because it was on warranty when I booted off of USB without getting into BIOS, booted ubuntu and deleted all the files (Trying to run a BIOS killer)
