Thread: [1 PETABYTE worth of storage.](#)

Mr. Robot - February 14, 2017, 4:44 pm

So I just wanted to share this video with you, it's linus opening a petabyte worth of harddrives that he's going to config and each one is 10terabytes(10,000gb).

To give you an idea here's how big a text file containing A-Z,a-z,0-9 at 10 characters in length. It would be every combination of letters and numbers at 10 characters long.

To keep 8199 petabytes, you would need exactly that times more of what he has in this video. 8,199x what we see in the following.

dante196 - February 15, 2017, 8:33 am

wow.. so the quantum computer from google has ~8 pb space drive.. that explains why it is so large

Anymus - February 16, 2017, 12:50 am

Holy moly shit, what is the price for all this disk ?

SIM-2830142 - February 16, 2017, 12:52 am

holy shit how much does this cost?

Groot_69 - February 16, 2017, 7:44 am

That is fucking insane! What the fuck do you need that much storage for exactly?? Like that is ridiculous!
