Thread: [Cant get OpenVPN to run on VPS](#)

Bloodfoldx - February 14, 2017, 6:40 pm

Im trying to startup openvpn on my VPS all steps were fine until I got to starting OpenVPN

when I typed `systemctl start openvpn@server.service`

I get...

Job for `openvpn@server.service` failed because the control process exited with error code. see "`systemctl status openvpn@server.service`" and "`journalctl -xe`" for details. So I ran `systemctl status openvpn@server.service` and it gave me this

```
Active: failed (Result: exit-code) since Wed 2017-02-15 02:16:22 GMT; 3min 23s ago
Process: 27866 ExecStart=/usr/sbin/openvpn --daemon --writepid /var/run/openvp
n/%i.pid --cd /etc/openvpn/ --config %i.conf (code=exited, status=1/FAILURE)
```
