Thread: [Cooking Timer with LARGE scrolling display](#)

?CARUs L?VE?™ - February 17, 2017, 12:39 pm

Hello all! I decided it would be neat to code a cooking timer one day when I realized I didn't have one :P I used LARGE scrolling text from a challenge Annikk.exe have given me, and utilizing :Calc_FPS from einstein1969

Also, using this line of code, I was able to capture the BEL ascii character, and produce a sound every time it displays your message :3

You can find more of these special characters [HERE](#)

Code for `if %%i in ('forfiles /m "%~nx0" /c "cmd /c echo 0x07") do set "BEL=%%i"`

Spoiler ([Click to View](#))

Have been trying to show people that batch is capable of other things than just the obvious :P I want people to think outside the box and code neat things in batch just because they can. I mean shit, do I think anyone would use this timer? Realistically, no I don't think anyone will use it. But that's not the point, the point is that it's different. It's not something batch was designed to do. I like stuff like that.
