other free keyloggers dont have less recovery options and also they dont work with the newest
version of browser where as Mine works

other then that, its free you can try out and know yourself how its better then other.

Just got this.. great simple little tool... if you want a keylogger that is free.. this is a good option ?

@Hexacrypt are you considering to release the source? or no?

should be very interesting to go trough the source of this tool..

Vitani - February 24, 2017, 12:13 am

This is actually a really cool effort, I would like to check this keylogger out and see how it works.

Also thanks for releasing it for free OP, it's a shame that keyloggers with the same functions as this one are being sold for a lot more then they are worth.

I am sorry, Not giving out source as I plan to add more Features to it.

Also its not based on any other Keylogger, most of them are custom coded regarding the keylogging Process.

Yeah i'm a beginner but i thought this was already crypted. Sorry.

So, i crypted it, its ok and i'm testing it now. I configure all settings, smtp runs. So i compile server.

I try to use it but when it launches, we have always the message

Why ?

under spyware.
you will need to use a crypter to bypass this detections.

All you have to do is uncheck download manager when you download from the site.

The file i downloaded from the site is klogger.rar.iso (Disc Image File) with size of 876kb. This file when extracted, displays an an application icon which looks suspicious because after installing, everything disappears.

How do you mean unchecking the download manager of the site?

Dude seriously, is it that hard?

Also you can see file size is 184kb and not 876kb

Yes, I'm 99%. I just scanned it with a few different anti viruses and most of them flagged this file. I wouldn't download this, unless you want a virus.

Here is the virustotal link (an online scanner):

<https://www.virustotal.com/en/file/a2c4b277b01b9c22014a6e6d300d5d9686a803563c857113149ddb9811c52ae/analysis/1493584971/>

100% Confirmed virus, MacKeeper has now installed itself on my computer. I left the file in to see if it was a virus and now i can confirm it is 100% virus, do not ask for link or download it
