Thread: [Searching for .exe-files and save result](#)

**M?xim** - February 18, 2017, 2:44 pm

Thanks for stopping by,

I need help with a command in CMD, hopefully, someone will be able to help me and that is appreciated.

[?] I need to search for all .exe files in a particular folder in C:\ and then save the result as a .txt - Is this possible to do with one command line? Yes, it must be one command and done in CMD.

**Mr. Monkey** - February 18, 2017, 3:34 pm

This command:

```
dir /S "C:\Users\User\*.exe" > "C:\Users\User\result.txt"
```

Will search all exe files in "C:\Users\User\" and will search also in the sub folders (the '/S' flag) and will redirect the output to this ""C:\Users\User\result.txt" file.

Have fun.

```
dir /S "C:\Users\User\*.exe" > "C:\Users\User\result.txt"
```

Will search all exe files in "C:\Users\User\" and will search also in the sub folders (the '/S' flag) and will redirect the output to this ""C:\Users\User\result.txt" file.

Have fun.

Works perfect, thank you. I appreciate your help.

Ran into a new problem; so I want to list what's in a folder, how do I pause between each frame? If that makes any sense.

Can word it better if needed. It is from a written instruction.

Did you mean you want to show with a whole path ?

If you write the command "tree" in C:\ for example, how do you make it show one "screen" at the

time?

Edit: tree c:\ /f | more worked

Thanks
