Thread: [{FREE} \[TXT\] 3GB Word list](#)

SaltyTayTay - February 18, 2017, 3:27 pm

Hack Forums members cant read for some reason

Here a 3 GB world list. Its a txt file.

I cant understand why people give me neg reputation and saying I try to infect them when I clearly say its malware software and only should use it in VM or Sandbox environment. And I'm not going to be on this forum anymore how it treats people who are new and trying to just get that 25 post to Pm. Could just slap a "You need to pay if you want shit" sticker. If you think this is infected go kys.

No media fire for you not wasting time uploading 3GB on two different websites. And fuck u who gave me a infected link warning. I told them its infected and should be careful. (If you going to insult me in any way in reply's save your time and don't cuz I wont read insults.) From now on il just post cracked games.

Why not post it in pastebin? Like, only people with the link can view.
