I bought Monero silent miner from TeePlow and it works like a charm! Smooth trade and good seller. Also i can tell u that "xHeaven" crypt service is compatible with this product.
My friend also has TeePlow "zcash silent miner" which is also works like a charm.
TeePlow, thank you sooo much!

What was the hash rate? How many computers was the miner successfully installed on? Did you install on bots purchased from HF? Computers you manage?

I second that, This does not work at all,my own miner is better and more undetected purchased to see if GPU mining works but stuck at 1 to 4 H/s so lowwww.

Young Sosa - April 6, 2017, 4:15 am

anyway .NET dependencies isn't so good for a Miner, you will able to infect only the 60% in 100 computers and that's not good it will decrease your execution rate.

Camaleon - May 20, 2017, 7:53 am

So you implied that this would not work on Bots purchased on a Botshop and that the reason why other see so low hashrates is because of that.

Its a Miner why it wouldn't work with Botshop bots? It has botkiller function so it will kill any other bots installed on the Machine.

It should work just as if the bot was acquired via spreading.

Or am I missing Something?

Very interested but the low Hash rate reported by others worries me.
