Thread: [\[GDI\] Custom color picker](#)

hfTP54 - February 23, 2017, 8:11 am

Thought I'd release this. Does not support eyedropper yet. Will add it soon.
Shows hsv palette but converts it to rgb and hex.

[Grab the code](#)

Edit:- Added HEX and updated layout. Will update the video after adding eyedropper and hsv numerics.

[Video: <https://youtu.be/F0ijyHLTXb0>]

Usage:

```
Code Dim c1 as new Customcolopicker()  
c1.Show()Code dim cl as color = c1.Color
```

Clicking on the selected color will close it.

Why not WPF? I am sure it is much less work to make something look good.

It's actually part of something else on winforms.

I like gdi too lol :D

Much better your release than this one:

<https://hackforums.net/showthread.php?tid=5487032>

Really a nice release. GJ ?

Narwin - February 23, 2017, 1:57 pm

This is nice sharing, I suggest you add the HEX Color too next to the ARGB if you know the way that's good if not you can get the idea from one of my released projects(iPalette).

Visual Freedom - February 23, 2017, 3:26 pm

Stick to GDI. This is amazing!

If you make a full tool like this: <https://color.adobe.com/de/create/color-wheel/>
You would get many downloads!

Rhez - February 23, 2017, 6:56 pm

Emezeeeng! I love that smooth animation in there.
Great Job! <3

hfTP54 - February 24, 2017, 6:20 am

Edit:- Added full HEX support

This has moved [here](#)
