Thread: [Cloudflare - CloudBleed HTTPS traffic leak](#)

Ainaj - February 23, 2017, 8:37 pm

Quote:Between 2016-09-22 - 2017-02-18 passwords, private messages, API keys, and other sensitive data were leaked by Cloudflare to random requesters. Data was cached by search engines, and may have been collected by random opponents over the past few months.

"The greatest period of impact was from February 13 and February 18 with around 1 in every 3,300,000 HTTP requests through Cloudflare potentially resulting in memory leakage (that's about 0.00003% of requests), potential of 100k-200k paged with private data leaked every day" - source

https://www.reddit.com/r/sysadmin/comments/5vu3yn/cloudbleed_seceurity_bug_cloudflare_reverse/

This data leak affects EVERY SITE THAT USES CLOUDFLARE, WHEREVER OR NOT IT USES SSL

Time to change your passwords bois

Mothdafucker beat me to posting by 20 seconds. Will close this
