Thread: [Open hug .txt file.](#)

hack3rcon - February 25, 2017, 8:03 am

Hello.

How can I open a .txt file with a size something 100 MB? Notepad crashed and can't open it. Any idea?

Thank you.

break the file up into smaller files, like 4 files, 25mb each

But he needs to open the file to break it to 4 pieces ???

ZwClose - February 25, 2017, 8:09 am

EmEditor, opened a 5gb file for me.

wrong.....

you must use windows ?

webdev77 - February 25, 2017, 1:08 pm

Using a text editor other than notepad would probably work better. Splitting the file is also a good option.

archangel.dmitry - February 25, 2017, 8:52 pm

Linux has great tools for working with text files.

Shikatanai - February 25, 2017, 8:59 pm

Split the txt using textsplitter, open bulk with notepad++

Reporter - February 25, 2017, 9:01 pm

Sublime Text should be able to open it without a problem

oop - February 26, 2017, 3:02 am

notepad ++ should work or try using 010Editor if your on windows , hope i could help.

LSDoom - February 26, 2017, 3:03 am

I use a program called EmEditor for large text files. Should be able to open pretty much anything.

Praet0rian - *February 26, 2017, 6:06 am*

It should work when it's 100 MB though, just let it load it all, it won't work until it loads, other editors will probably read async as it loads.
