Hi guys

I would like to offer my coding services to everyone.

My skills are good enough to code most programs to an acceptable level.

I will offer cheap prices for the type of program you wish. I even have some projects that I could use.

Please pm me with any questions.

Jc?

Bump let me know. Cheap prices for the work.

Can you edit/clean up code that's already been written? Could you also modify code that makes clicks inside a video game click at new coordinates?

Thanks.
